Self-leadership

Routledge

This is a review of selected areas and topics within cross-cultural psychology.

The chapters presented provide a review of where

cross-cultural

psychology has been, and where it is headed in the future; and should be a valuable guide for beginning researchers and

scholars alike.
Early Syntactic Development
Springer Science & Business Media
This volume is concerned with elucidating similarities and differences in enculturation processes that help to account for the ways in which individuals in different cultures develop. Each chapter reviews a substantive parenting topic, describes the relevant cultures (in psychological ethnography, rather than from an anthropological stance), reports on the parenting-in-culture results, and discusses the significance of

cross-cultural investigation for understanding the parenting issue of interest. Specific areas of study include environment and interactive style, responsiveness, activity patterns, distributions of social involvement with children, structural patterns of interaction, and development of the social self. Through exposure to a wide range of diverse research methods, readers will gain a deeper appreciation of the problems, procedures, possibilities, and profits associated with a truly comparative approach to understanding

human growth and development.

Altruism in Cross-Cultural Perspective provides such a scholarly overview, examining the intersection of culture and such topics as evolutionary accounts of altruism and the importance of altruism in ritual and religion. The past

decade has seen a proliferation of research on altruism, made possible in part by significant funding from organizations such as the John Templeton Foundation. While significant research has been conducted on biological, social, and individual dimensions of altruism, there has been no attempt to provide an overview of the ways that altruistic behavior and attitudes vary across cultures. The book addresses the methodological challenges of researching altruism across cultures, as well as the ways that altruism is manifest in difficult circumstances. A

particular strength of the book is its attention to multiple disciplinary approaches to understanding altruism, with contributors from fields including psychology, anthropology, sociology, biology, communication, philosophy, religious studies, gender studies, and bioethics. *Cross-Cultural Approaches to the Study of Alcohol* Routledge This compilation of conference proceedings consists of 44 separate "chapters" or selections that are

spread over about ten sections. The sections deals with such topics as historical and epistemological factors, cognitive and intellectual perspectives, and clinical and mental health. *Competition and Cooperation* NYU Press Living and studying away from home can turn out to be an enriching and rewarding experience for many international students. Yet, many of

them struggle to cope with their new university life due to distinct challenges such as cultural differences, language and communication barriers, and a lack of social support. Through a diverse collection of personal essays, this book captures some of the stories of international students as they reflect on their intercultural encounters, expectations, and experiences in their new surroundings and local communities. Essay themes range from culture shock to resilience, and they cover a variety of topics including the ways students change and gain new perspectives by being away from their comfort zone, the feeling of isolation and being an outsider, and the uncertainties of making new friends. This book provides readers with a unique opportunity to walk a mile in the shoes of an international student. It also highlights the importance of a strong support system for students in both the curricular and co-curricular settings and offers insights to international educators and university administrator

s into creating a welcoming environment that fosters international understanding and cross-cultural awareness on campus.

understanding of the challenges facing organizations and business today. This text breaks new ground in introducing organizational psychology from a cross cultural perspective. It provides a foundational overview of the current major theories in organizational psychology, and illuminates the impact of cultural differences on organizational dynamics. It also makes available specific research concerning our current understandings of how these dynamics play out in particular regions and countries, such as autocratic versus democratic leadership styles in Africa and Europe or conflict management in Asia. The volume offers a welcome introduction to those in industrial/organizational psychology, international relations and management, and international business/MBA programs focusing on international issues. *Universals of Human Thought* Rowman Altamira Crossing Cultures provides a bold and refreshing new resource for teachers and trainers with proven methods for developing coping strategies and problem-solving skills in the cross-cultural arena. A comprehensive study structured to provide a framework for

An international look at the similarities and differences of long-lasting trauma Trauma and Dissociation in a Cross-Cultural Perspective examines the psychological, sociological, political, economic, and cultural aspects of trauma and its

consequences on people around the world. Dispelling the myth that trauma-related dissociative disorders are a North American phenomenon, this unique book travels through more than a dozen countries to analyze the effects of long-lasting traumatization—both natural and man-made—on adults and children. Working from theoretical and clinical

perspectives, the field's leading experts address trauma in situations that range from the psychological effects of "the Troubles" in Northern Ireland to the emergence of "Hikikomori," the phenomenon of social withdrawal in Japanese youth. Reactions to trauma can be both unique according to a person's culture and
