Kubernetes has become the dominant container orchestrator, but many organizations that have recently adopted this system are still struggling to run actual production workloads. In this practical book, four software engineers from VMware bring their shared experiences running Kubernetes in production and provide insight on key challenges and best practices. The brilliance of

Kubernetes is how configurable and extensible the system is, from pluggable runtimes to storage integrations. For platform engineers, software developers, infosec, network engineers, storage engineers, and others, this book examines how the path to success with Kubernetes involves a variety of technology, pattern, and abstraction considerations. With this book, you will: Understand what the path to production looks like when using Kubernetes Examine where gaps exist in your current Kubernetes strategy Learn Kubernetes's essential building blocks--and their trade-offs Understand what's involved in making Kubernetes a viable location for

applications Learn better ways to navigate the cloud native landscape Depomod Academic Press Heavy-metal contamination is one of the world's major environmental problems, posing significant risks to agro-ecosystems. Conventional technologies employed for heavy-metal remediation have often been expensive and disruptive. This book provides comprehensive, state-of-the-art coverage of the natural, sustainable alternatives that use a wide range of biological materials in the removal/detoxification of heavy metals, consequently leading to the improvement of crops in these soils. Novel, environmentally friendly and inexpensive solutions are presented based on a sound understanding of metal contamination and the roles of plants and microbes in the management of these toxic soils. Written by worldwide experts,

the book provides not only the necessary scientific background but also addresses the challenging questions that require special attention in order to better understand metal toxicity in soils and its management through bioremediation.

"Richard Blanco, a Cuban raised in the United States, records his threefold burdens: learning and adapting to American culture, translating for family and friends, and maintaining

his own roots. . . . Blanco is already a mature, seasoned writer, and his powers of description and determination to get every nuance correct are evident from the first poem. . . .

Absolutely essential for all libraries." --Library Journal

"As one of the newer voices in Cuban-American poetry, Blanco write about the reality of an uprooted culture and how the poet binds the farthest regions of the world together through language. . . . This book describes the price of exile and extends beyond the shores of America and the imagined shores of home."

--Bloomsbury Review

"Unlike most contemporary minority poetry, *City of a Hundred Fires*, introduces readers to the fullness and richness of ethnic life, and not only the frustration and isolation so often associated with it. Richard Blanco exquisitely portrays the triumphs and defeats of a land and a people that have just barely survived revolution and time, and, without sentiment or cliché, affirms the ability within us all to achieve wholeness." --Indiana Review "Blanco is a fine

young poet, and this poetry, the bread and wine of our language of exile, is pure delight. May he continue to produce such a heavenly mix of rhythm and image-these poems are more than gems, they are the truth not only about the Cuban-American experience, but of our collective experience in the United States, a beautiful land of gypsies." --Virgil Suarez

Richard Blanco was, as he says, "made in Cuba, assembled in Madrid, and imported to the United States," meaning he was conceived in Cuba, born in Madrid, and arrived in the United States as an infant able to claim citizenship in three different countries. His work has appeared in many journals, magazines, and anthologies, including the *Nation*, *Michigan Quarterly*, *TriQuarterly*, and *Indiana Review*. Blanco is a graduate of the MFA program in creative writing at Florida International University and also works as a civil engineer.

Two brothers. One prophecy. A world in peril. When Kaiel loses his chance to become

part of the legendary Daemon Hunters, joining the Bronze Guard mercenaries seems like the logical alternative. It is an opportunity to put his training to use and, more importantly, as the company is currently in the employ of Prince Alesandr, it will allow him to keep an eye on his younger brother, Darien, who's determined to follow his dream of becoming a Ciralys magic-user. But the broken continent of Athmay still bears the scars of the war between the Summoners some three-thousand years ago, and an unexpected battle with a daemon - a remnant of that ancient war - reveals the brothers' connection to a forbidden bloodline. Soon they find themselves on the run from the prince, daemoniac hordes, and a prophecy that could break the world anew.

Presented in a clear and concise way as an introductory text and practical handbook, the book provides the basic physical phenomena governing underwater acoustical waves, propagation, reflection, target backscattering and noise. It covers the general features of sonar systems, transducers and arrays, signal processing and performance evaluation. It provides an overview of today's applications, presenting the working

principles of the various systems. From the reviews: "Presented in a clear and concise way as an introductory text and practical handbook, the book provides the basic physical phenomena governing underwater acoustical waves, propagation, reflection, target backscattering and noise. It provides an overview of today's applications, presenting the working principles of the various systems." (Oceanis, Vol. 27 (3-4), 2003) "This book is a general survey of Underwater Acoustics, intended to make the subject as easily accessible as possible, with a clear emphasis on applications. In this the author has succeeded, with a wide variety of subjects presented with minimal derivation. There is an emphasis on technology and on intuitive physical explanation." (Darrell R. Jackson, *Journal of the Acoustic Society of America*, Vol. 115 (2), February, 2004) "This is an exciting new scientific publication. It is timely and welcome. Furthermore, it is up to date and readable. It is well researched, excellently published and ranks with earlier books in this discipline. Many persons in the marine science field including

acousticians, hydrographers, oceanographers, fisheries scientists, engineers, educators, students and equipment manufacturers will benefit greatly by reading all or part of this text. The author is to be congratulated on his fine contribution." (Stephen B. MacPhee, International Hydrographic Review, Vol. 4 (2), 2003)

**Artificial Reefs in European Seas** focuses on artificial reef research in the Mediterranean and NE Atlantic. The book describes most of the long-term projects running in European seas, presents the legal and economic issues, and suggests future uses for artificial reefs in the European context. Readership: Professionals working on or interested in the uses of artificial reefs for fishery management, coastal zone management, aquaculture and nature conservation. The case studies of reef research programmes make the book ideal for degree students studying topics in ecology, and fisheries and coastal management.

This volume offers insight in the identification and selection procedure of marine protected areas in the German exclusive economic zones (EEZs) of the North - and Baltic Seas. EU Member States are obliged to establish a coherent network of protected areas, consisting of sites identified under the EC Habitats and Birds Directives. The goal of this Natura 2000 network is the conservation of biodiversity on land and in the sea. To fill important gaps in knowledge regarding the presence, abundance, and distribution of certain species and habitats in the German North- and Baltic Seas, the German Federal Agency for Nature Conservation (BfN) initiated a detailed research programme, involving researchers from many renowned German marine research institutes. This book contains the main results of the different projects under this research programme, which formed the basis for the identification and selection of the Natura 2000 sites. Information is given on two NATURA 2000 habitats (sandbanks and reefs), and benthic species, fish, birds and marine mammals, as well as on legal aspects and implementation procedures. Last but not least the book introduces the current status of NATURA 2000 in the German EEZ. Target audience are not only scientists, but also policymakers, environmental organisations and other stakeholders, and the book

includes many illustrations.

Concerns over the potential ecological effects of fishing have increased with the expansion of fisheries throughout the marine waters of the United States. Effects of Trawling and Dredging on Seafloor Habitat describes how assessment of fishing impacts depends on gear type, number and location of bottom tows, and the physical and biological characteristics of seafloor habitats. Many experimental studies have documented acute, gear-specific effects of trawling and dredging on various types of habitat. These studies indicate that low mobility, long-lived species are more vulnerable to towed fishing gear than short-lived species in areas where the seabed is often disturbed by natural phenomena. Trawling and dredging may also change the composition and productivity of fish communities dependent on seafloor habitats for food and refuge. The scale of these impacts depends on the level of fishing effort. This volume presents color maps of fishing effort for all regions with significant bottom trawl or dredge fisheries -- the first time that such data has been assembled and analyzed for the entire nation.

Family continues to be a

wellspring of inspiration and learning for Blanco. His third book of poetry, *Looking for The Gulf Motel*, is a genealogy of the heart, exploring how his family's emotion legacy has shaped—and continues shaping—his perspectives. The collection is presented in three movements, each one chronicling his understanding of a particular facet of life from childhood into adulthood. As a child born into the milieu of his Cuban exiled familia, the first movement delves into early questions of cultural identity and their evolution into his unrelenting sense of displacement and quest for the elusive meaning of home. The second, begins with poems peering back into family again, examining the blurred lines of gender, the frailty of his father-son relationship, and the intersection of his cultural and sexual identities as a Cuban-American gay man living in rural Maine. In the last movement, poems focused on his mother's life shaped by exile, his father's death, and the passing of a generation of relatives, all provide lessons about his own impermanence in the world and the permanence of loss. *Looking for the Gulf Motel* is looking for the beauty of that which we cannot hold onto, be it

country, family, or love.

This book reviews the need for marine conservation, summarizes general measures for ocean and coastal conservation, and explains the rationale for establishing marine protected areas. The second half of the book is

essentially a guideline for designing and implementing protected areas in order to make them viable and long-lasting in their effectiveness.

In his second book of narrative, lyric poetry, Richard Blanco explores the familiar, unsettling journey for home and connections, those anxious musings about other lives: "Should I live here? Could I live here? Whether the exotic (I'm struck with Maltese fever I dream of buying a little Maltese farm) or merely different (Today, home is a cottage with morning in the yawn of an open window), he examines the restlessness that threatens from merely staying put, the fear of too many places and too little time. The words are redolent with his Cuban heritage: Marina making mole sauce; T'a Ida bitter over the revolution, missing the sisters who fled to Miami; his father, especially, his hair once as black as the black of his oxfords. Yet this is a volume for all who have longed for enveloping arms and words, and for that sanctuary called home. So much of my life spent like this-suspended, moving toward unknown places and names or returning to those I know, corresponding with the paradox of crossing, being nowhere yet here."

Blanco embraces juxtaposition. There is the Cuban Blanco, the American Richard, the engineer by day, the poet by heart, the rhythms of Spanish, the percussion of English, the first-world professional, the immigrant, the gay man, the straight world. There is the ennui behind the question: why cannot I not just live where I live? Too, there is the precious, fleeting relief when he can write "ÉI am, for a moment, not afraid of being no more than what I hear and see, no more than this:..." It is what we all hope for, too.
