From Square One is Dean Olsher's captivating

and in-depth exploration of the cultural history, psychology, and even metaphysics of crosswords -- their promise of a world without chaos and uncertainty. It is often repeated that more than 50 million Americans do crossword puzzles on a regular basis. Skeptical of that claim, Dean Olsher does his own research and finds that the number is nearly dead-on. Filled with lively, original reporting, *From Square One* disputes the widely held belief that solving crosswords helps prevent Alzheimer's; in fact, the drive to fill in empty spaces is more likely a mental illness than a cure. While "puzzle addiction" is usually meant as a lighthearted metaphor, the term contains more than a nugget of truth. Olsher looks into the origins and traditions of this popular pastime, which made its debut in a New York newspaper in 1913. Or did it? Along the way, he takes readers inside the making of a crossword. He

also revives the quest of musical-theater legend and puzzle constructor Stephen Sondheim to find an American audience for a British crossword style that demands a love of verbal playfulness over knowledge of arcane trivia. Informative, engaging, and often surprising, *From Square One* is a unique and enjoyable read for puzzlers and nonpuzzlers alike.

Bored with their work, three Milanese editors cook up "the Plan," a hoax that connects the medieval Knights Templar with other occult groups from ancient to modern times. This produces a map indicating the geographical point from which all the powers of the earth can be controlled—a point located in Paris, France, at

Foucault's Pendulum. But in a fateful turn the joke becomes all too real, and when occult groups, including Satanists, get wind of the Plan, they go so far as to kill one of the editors in their quest to gain control of the earth. Orchestrating these and other diverse characters into his multilayered semiotic adventure, Eco has created a superb cerebral entertainment.

Here is the first comprehensive survey of modern craft in the United States. Makers follows the development of studio craft--objects in fiber, clay, glass, wood, and metal--from its roots in nineteenth-century reform movements to the rich diversity of expression at the end of the twentieth century. More than four

hundred illustrations complement this chronological exploration of the American craft tradition. Keeping as their main focus the objects and the makers, Janet Koplos and Bruce Metcalf offer a detailed analysis of seminal works and discussions of education, institutional support, and the philosophical underpinnings of craft. In a vivid and accessible narrative, they highlight the value of physical skill, examine craft as a force for moral reform, and consider the role of craft as an aesthetic alternative. Exploring craft's relationship to fine arts and design, Koplos and Metcalf foster a critical understanding of the field and help explain craft's place in contemporary culture. Makers will be an indispensable volume for craftspeople, curators, collectors, critics, historians, students, and anyone who is interested in American craft.

Gallic Books
New York Times Bestseller In the most ambitious one-volume American history in decades, award-winning historian and New Yorker writer Jill Lepore offers a magisterial account of the origins and rise of a divided nation, an urgently needed reckoning with the beauty and tragedy of American history. Written in elegiac prose, Lepore's groundbreaking investigation places truth itself—a devotion to facts, proof, and evidence—at the center of the nation's history. The American experiment rests on three ideas—"these truths," Jefferson called them—political equality, natural rights, and the sovereignty of the people.

And it rests, too, on a fearless dedication to inquiry, Lepore argues, because self-government depends on it. But has the nation, and democracy itself, delivered on that promise? These Truths tells this uniquely American story, beginning in 1492, asking whether the course of events over more than five centuries has proven the nation's truths, or belied them. To answer that question, Lepore traces the intertwined histories of American politics, law, journalism, and technology, from the colonial town meeting to the nineteenth-century party machine, from talk radio to twenty-first-century Internet polls, from Magna Carta to the Patriot Act, from the printing press to Facebook News. Along the way, Lepore's sovereign chronicle is filled

with arresting sketches of both well-known and lesser-known Americans, from a parade of presidents and a rogues' gallery of political mischief makers to the intrepid leaders of protest movements, including Frederick Douglass, the famed abolitionist orator; William Jennings Bryan, the three-time presidential candidate and ultimately tragic populist; Pauli Murray, the visionary civil rights strategist; and Phyllis Schlafly, the uncredited architect of modern conservatism. Americans are descended from slaves and slave owners, from conquerors and the conquered, from immigrants and from people who have fought to end immigration. "A nation born in contradiction will fight forever over the meaning of its history," Lepore writes,

but engaging in that struggle by studying the past is part of the work of citizenship.

"The past is an inheritance, a gift and a burden," These Truths observes. "It can't be shirked. There's nothing for it but to get to know it."

Art Puzzles by Numbers is the most electrifying new kind of puzzle to come along in many years. These beguiling puzzles already have millions of devoted fans in Japan, where they were invented years ago. And now Art

Puzzles by Numbers has been introduced to the United States where its popularity is growing enormously. A Student Recommended Resource for Math and Pre-Algebra by Utah Textbook Commission. "You may never, but the ability to think through a problem that needs to be solved will be invaluable in whatever career you pursue," and I often ask "When will I use Algebra, Geometry..." and my response has become-"You may never, but the ability to think through a problem that needs to be solved will be invaluable in whatever career you pursue," and I feel that these puzzles help in that process. The concept is cleverly simple. You start with an empty grid. The numbers to the side and above tell you how many squares to fill in the

columns and rows. The trick is that the numbers don't tell you which squares to fill in that's for you to decide through logical reasoning and by operating back and forth between the columns and the rows.
