In the Handbook of Injury and Violence Prevention, over fifty experts present the current landscape of intervention methods - from risk reduction to rethinking social norms - as they address some of the most prevalent forms of accidental and violent injury. - Overview chapters examine the social and economic scope of unintentional and violent injury today - Extensive literature review of specific intervention programs to prevent violence and injury - Special chapters on childhood injuries, alcohol-related accidents, and disasters - "Interventions in the Field" section offers solid guidelines for implementing and improving existing programs - Critical

analysis of issues involved in delivering programs to wider audiences - Helpful appendices list relevant agencies and professional resources This dual focus on intervention and application makes the Handbook a bedrock text for professionals involved in delivering or managing prevention programs. Its what-works-now approach gives it particular utility in the graduate classroom, and researchers will benefit from the critical attention paid to knowledge gaps in the field. It is a major resource for any reader committed to reducing the number of incidents just waiting to happen.

Arsenic in drinking water derived from groundwater is arguably the biggest environmental chemical human health risk known at the present time, with well over 100,000,000 people around the world being exposed. Monitoring the hazard, assessing exposure and health risks and implementing effective remediation are therefore key tasks for organisations and individuals with responsibilities related to the supply of safe, clean drinking water. Best Practice Guide on the Control of Arsenic in Drinking Water, covering aspects of hazard distribution, exposure, health impacts, biomonitoring and remediation, including

social and economic issues, is therefore a very timely contribution to disseminating useful knowledge in this area. The volume contains 10 short reviews of key aspects of this issue, supplemented by a further 14 case studies, each of which focusses on a particular area or technological or other practice, and written by leading experts in the field. Detailed selective reference lists provide pointers to more detailed guidance on relevant practice. The volume includes coverage of (i) arsenic hazard in groundwater and exposure routes to humans, including case studies in USA, SE Asia and UK; (ii) health impacts arising from exposure to arsenic in drinking water and biomonitoring approaches; (iii) developments in the nature of regulation of

arsenic in drinking water; (iv) sampling and monitoring of arsenic, including novel methodologies; (v) approaches to remediation, particularly in the context of water safety planning, and including case studies from the USA, Italy, Poland and Bangladesh; and (vi) socio-economic aspects of remediation, including non-market valuation methods and local community engagement.

This book is the first to combine a legal and an economic approach to the violation of international investment law and the evaluation of their financial consequences. It is intended for arbitrators, lawyers, legal experts and financial experts. It will also be

useful for academics who study this issue, which crosses disciplinary lines. The cross-disciplinary approach proposed by Mikael Ouaniche and St é phane Prigent in this original work reflects the dual nature of the debates that irrigate the practice of State-investor arbitration, through a rigorous analysis of arbitral case law. As Laurent Jaeger, President of the French Arbitration Committee, who prefaced the book, says: “ Lawyers and arbitrators will be able to improve their understanding of economic and financial valuation methods; experts will be able to improve their understanding of the underlying legal mechanisms. [...] It took all the experience and talent of Mikael Ouaniche and St é phane Prigent to marry law, economics and finance so harmoniously ” .

Seagrasses are unique plants; the only group of flowering plants to recolonise the sea. They occur on every continental margin, except Antarctica, and form ecosystems which have important roles in fisheries, fish nursery grounds, prawn fisheries, habitat diversity and sediment stabilisation. Over the last two decades there has been an explosion of research and information on all aspects of seagrass biology. However the compilation of all this work into one book has not been attempted previously. In this book experts in 26 areas of seagrass biology present their work in chapters which are state-of-the-art and designed to be useful to students and researchers alike. The book not only focuses on what has been discovered

but what exciting areas are left to discover. The book is divided into sections on taxonomy, anatomy, reproduction, ecology, physiology, fisheries, management, conservation and landscape ecology. It is destined to become the chosen text on seagrasses for any marine biology course.

As a radical critique of theoretical sociological orthodoxy, The Dominant Ideology Thesis has generated controversy since first publication. It has also been widely accepted, however, as a major critical appraisal of one central theoretical concern within modern Marxism and an important contribution to the current debate about the functions of ideology in social life.

"This book is a translation of historian Carlo Ginzburg's latest collection of essays. Through the detective work of uncovering a wide variety of stories or microhistories from fragments, Ginzburg takes on the bigger questions: How do we draw the line between truth and fiction? What is the relationship between history and memory? Stories range from medieval Europe, the inquisitional trial of a witch, seventeenth-century antiquarianism, and twentieth-century historians"--Provided by publisher.

"Over 8,200 large city fires broke out between 1000 and 1939 CE in Central Europe. Prometheus Tamed inquires into the long-term history of that fire ecology, its local and regional frequencies, its relationship to climate history. It asks for the visual

and narrative representation of that threat in everyday life. Institutional forms of fire insurance emerged in the form of private joint stock companies (the British model, starting in 1681) or in the form of cameralist fire insurances (the German model, starting in 1676). They contributed to shape and change society, transforming old communities of charitable solidarity into risk communities, finally supplemented by networks of cosmopolite aid. After 1830, insurance agencies expanded tremendously quickly all over the globe: Cultural clashes of Western and native perceptions of fire risk and of what is insurance can be studied as part of a critical archaeology of world risk society and the plurality of modernities"--

This book represents the first multidisciplinary scientific work on a deep volcanic maar lake in comparison with

other similar temperate lakes. The syntheses of the main characteristics of Lake Pavin are, for the first time, set in a firmer footing comparative approach, encompassing regional, national, European and international aquatic science contexts. It is a unique lake because of its permanently anoxic monimolimnion, and furthermore, because of its small surface area, its substantially low human influence, and by the fact that it does not have a river inflow. The book reflects the scientific research done on the general limnology, history, origin, volcanology and geological environment as well as on the geochemistry and biogeochemical cycles. Other chapters focus on the biology and microbial ecology whereas the sedimentology and

paleolimnology are also given attention. This volume will be of special interest to researchers and advanced students, primarily in the fields of limnology, biogeochemistry, and aquatic ecology. This advances a theory that seeks to integrate the political, economic, and cultural factors that brought these revolutions about, and links structural theorizing with original ideas on culture and agency. It attempts to explain why so few revolutions have succeeded, while so many have failed. The book is divided into chapters that treat particular sets of revolutions including the great social revolutions of Mexico 1910, China 1949, Cuba 1959, Iran 1979, and Nicaragua 1979, the anticolonial revolutions in Algeria, Vietnam, Angola, Mozambique, and Zimbabwe from the 1940s to the 1970s, and the failed revolutionary attempts in El Salvador, Peru, and elsewhere. It closes with speculation about the future of revolutions in an age of globalization, with special

Phytoalexins are antimicrobial substances of low molecular weight produced by plants in response to infection or stress, which form part of their active defense mechanisms. It is now clear that phytoalexins exhibit toxicity across much of the biological spectrum, prokaryotic and eukaryotic. Starting in the 1950s, research on phytoalexins has begun with biochemistry and bio-organic chemistry, resulting in the determination of their structure, their biological activity as well as mechanisms of their synthesis and their catabolism by microorganisms. Elucidation of the biosynthesis of numerous phytoalexins has also permitted the use of molecular biology tools for

the exploration of the genes encoding enzymes of their synthesis pathways and their regulators.

This has led to potential applications for increasing plant resistance to diseases.

Phytoalexins display an enormous diversity belonging to various chemical families such as isoflavones, isoflavanones, pterocarpanes, isoflavans, flavanones, coumestans, furanoacetylenes, phenylpropanoids, steroid glycoalkaloids, norsesquiterpenoids/sesquiterpenoids, coumarins, diterpenes, ent-kaurane-related diterpenoids, acidic sesquiterpenoids, 3-deoxyanthocyanidins, naphthaldehydes, indoles and stilbenes. Research papers dealing with all aspects of phytoalexins, including structure elucidation; chemical synthesis; methods for phytoalexin analysis in plant extracts or biological fluids; biosynthesis

studies including modulation of phytoalexin synthesis; engineering of phytoalexin biochemical pathways in plants and microbes; biological activities; structure/activity relationships; phytoalexin metabolism in plants and by micro-organisms; roles and ATP Binding Cassette (ABC) transporters or Multi-Drugs Efflux (MDE) transporters are welcome for inclusion in this Special Issue of Molecules. Review articles, particularly those dealing with the themes mentioned above are also particularly welcome for inclusion.

Since Antiquity the natural pearls of the Gulf have been famed as the finest, most lustrous and most plentiful that the world can offer. From the beginnings of trade until the 1930s, these pearls were a major product of the Gulf's coastal peoples. Latterly, from the 17th to the

early 20th centuries, rising international demand turned pearling into their economic mainstay. By this time pearls were fished in their millions, and pearling became the pillar of the regional economy, dominating the lives, health and expectations of entire shajhdoms. The influx of people and wealth to the coast permanently transformed the Gulf, providing the manpower and capital to germinate and nurture the city-states - notably Kuwait, Bahrain, Qatar, Abu Dhabi, Dubai, Sharjah and Ras al-Khaimah - which endure there today. Despite its formative role, there has until now been no book taking the entire history of pearling as its subject. Dr Carter's ground-breaking work traces its evolution on both the Arabian and the Persian sides of the Gulf, and explores the role it played in shaping the political, social and urban configuration that we see in the region today. It

shows the extent to which the Gulf economy became dependent on a single commodity, and how, in that respect, pearling resembled the oil industry that would replace it. Lavishly illustrated, this book covers in unprecedented detail the history, development, conduct, florescence and catastrophic collapse of the industry in the early 20th century. It will fascinate not only those wishing to understand the growth and conduct of the pearl fishery, but also those interested in the history of the region and the origins of the Gulf states, and in the colourful story of the global taste for one of mankind's most highly prized precious stones.

Growing human populations and higher demands for water impose increasing impacts and stresses upon freshwater biodiversity. Their combined effects have made these animals more endangered than their terrestrial and marine counterparts. Overuse and contamination of water, overexploitation and overfishing, introduction of alien species, and alteration

of natural flow regimes have led to a 'great thinning' and declines in abundance of freshwater animals, a 'great shrinking' in body size with reductions in large species, and a 'great mixing' whereby the spread of introduced species has tended to homogenize previously dissimilar communities in different parts of the world. Climate change and warming temperatures will alter global water availability, and exacerbate the other threat factors. What conservation action is needed to halt or reverse these trends, and preserve freshwater biodiversity in a rapidly changing world? This book offers the tools and approaches that can be deployed to help conserve freshwater biodiversity.

Stereotactic Body Radiation Therapy Saint James Press

Stereotactic body radiation therapy (SBRT) has emerged as an important innovative treatment for various primary and metastatic cancers. This book provides a comprehensive and up-to-date account of

the physical/technological, biological, and clinical aspects of SBRT. It will serve as a detailed resource for this rapidly developing treatment modality. The organ sites covered include lung, liver, spine, pancreas, prostate, adrenal, head and neck, and female reproductive tract. Retrospective studies and prospective clinical trials on SBRT for various organ sites from around the world are examined, and toxicities and normal tissue constraints are discussed. This book features unique insights from world-renowned experts in SBRT from North America, Asia, and Europe. It will be necessary reading for radiation oncologists, radiation oncology residents and fellows, medical physicists, medical physics residents, medical oncologists, surgical

oncologists, and cancer scientists.
