Arsenic in drinking water derived from groundwater is arguably the biggest environmental chemical human health risk known at the present time, with well over 100,000,000 people around the world being exposed. Monitoring the hazard, assessing exposure and health risks and implementing effective remediation are therefore key tasks for organisations and individuals with responsibilities related to the supply of safe, clean drinking water. Best Practice Guide on the Control of Arsenic in Drinking Water,

covering aspects of hazard distribution, exposure, health impacts, biomonitoring and remediation, including social and economic issues, is therefore a very timely contribution to disseminating useful knowledge in this area. The volume contains 10 short reviews of key aspects of this issue, supplemented by a further 14 case studies, each of which focusses on a particular area or technological or other practice, and written by leading experts in the field. Detailed selective reference lists provide pointers to more detailed guidance on relevant practice. The volume includes coverage of (i) arsenic hazard in groundwater and exposure routes to humans, including case studies in USA, SE Asia and UK; (ii) health impacts arising from exposure to arsenic in drinking water and biomonitoring approaches; (iii) developments in the nature of regulation of arsenic in drinking water; (iv) sampling and monitoring of arsenic, including novel methodologies; (v) approaches to remediation, particularly in the context of water safety planning, and including case studies from the USA, Italy,

Poland and Bangladesh; and (vi) socio-economic aspects of remediation, including non-market valuation methods and local community engagement.

Growing human populations and higher demands for water impose increasing impacts and stresses upon freshwater biodiversity. Their combined effects have made these animals more endangered than their terrestrial and marine counterparts. Overuse and contamination of water, overexploitation and

overfishing, introduction of alien species, and alteration of natural flow regimes have led to a 'great thinning' and declines in abundance of freshwater animals, a 'great shrinking' in body size with reductions in large species, and a 'great mixing' whereby the spread of introduced species has tended to homogenize previously dissimilar communities in different parts of the world. Climate change and warming temperatures will alter global water availability, and exacerbate the other threat factors. What conservation action is needed to halt or reverse these trends, and preserve freshwater biodiversity in a rapidly changing world? This book offers the tools and approaches that can be deployed to help conserve freshwater biodiversity.

"This book is a translation of historian Carlo Ginzburg's latest collection of essays. Through the detective work of uncovering a wide variety of stories or microhistories from fragments,

---

Ginzburg takes on the bigger questions: How do we draw the line between truth and fiction? What is the relationship between history and memory? Stories range from medieval Europe, the inquisitional trial of a witch, seventeenth-century antiquarianism, and twentieth-century historians"--Provided by publisher.

This treatise had its origins in the authors' strong opinion that the discovery of new drugs, especially of innovative therapeutic agents, really does not happen as a spontaneous sequel to investigative research, no matter how penetrating such research may be. Rather, it seemed to us that the discovery of innovative therapeutic agents was a very active process, existing in and of itself, and demanding full attention-it was not simply a passive, dependent by-product of investigative research. And yet, many researchers some close confreres of the authors, others more distant-believed otherwise. We felt that their view reflected unrealistic thinking and that reality probably lay closer to what Beyer" maintained: We are taught to believe that if we can understand a disease it should be easy enough to figure out, say, the molecular configuration of a definitive receptor mechanism somewhere along the line and to design a specific drug . . . . And so we start out to understand the disease but never get around to doing much about therapy. The authors very soon realized that there was essentially no quantitative information available on just where and how innovative therapeutic agents were discovered. There were only anecdotal accounts, and these were able to be selected and presented in ways that could be used to defend any point of view.

"Over 8,200 large city fires broke out between 1000 and 1939 CE in Central Europe. *Prometheus Tamed* inquires into the long-term history of that fire ecology, its local and regional frequencies, its relationship to climate history. It asks for the visual and narrative representation of that threat in every-day life. Institutional forms of fire insurance emerged in the form of private joint stock companies (the British model, starting in 1681) or in the form of cameralist fire insurances (the German model, starting in 1676). They contributed to shape and change society, transforming old communities of charitable solidarity into risk communities, finally supplemented by networks of cosmopolite aid. After 1830, insurance agencies expanded tremendously quickly all over the globe: Cultural clashes of Western and native perceptions of fire risk and of what is insurance can be studied as part of a critical archaeology of world risk society and the plurality of modernities"--

This book is the first to combine a legal and an economic approach to the violation of international investment law and the evaluation of their financial consequences. It is intended for arbitrators, lawyers, legal experts and financial experts. It will also be useful for academics who study this issue, which crosses disciplinary lines. The cross-disciplinary approach proposed by Mikael Ouaniche and Stéphane Prigent in this original work reflects the dual nature of the debates that irrigate the practice of State-investor arbitration, through a rigorous analysis of arbitral case law. As Laurent Jaeger, President of the French Arbitration Committee, who prefaced the book, says: "Lawyers and arbitrators will be able to improve their understanding of economic and financial valuation methods; experts will be able to improve

their understanding of the underlying legal mechanisms. [...] It took all the experience and talent of Mikael Ouaniche and St é phane Prigent to marry law, economics and finance so harmoniously ” .

Since Antiquity the natural pearls of the Gulf have been famed as the finest, most lustrous and most plentiful that the world can offer. From the beginnings of trade until the 1930s, these pearls were a major product of the Gulf's coastal peoples. Latterly, from the 17th to the early 20th centuries, rising international demand turned pearling into their economic mainstay. By this time pearls were fished in their millions, and pearling became the pillar of the regional economy, dominating the lives, health and expectations of entire shaikhdoms. The influx of people and wealth to the coast permanently transformed the Gulf, providing the manpower and capital to germinate and nurture the city-states - notably Kuwait, Bahrain, Qatar, Abu Dhabi, Dubai, Sharjah and Ras al-Khaimah - which endure there today. Despite its formative role, there has until now been no book taking the entire history of pearling as its subject. Dr Carter's ground-breaking work traces its evolution on both the Arabian and the Persian sides of the Gulf, and explores the role it played in shaping the political, social and urban configuration

---

that we see in the region today. It shows the extent to which the Gulf economy became dependent on a single commodity, and how, in that respect, pearling resembled the oil industry that would replace it. Lavishly illustrated, this book covers in unprecedented detail the history, development, conduct, florescence and catastrophic collapse of the industry in the early 20th century. It will fascinate not only those wishing to understand the growth and conduct of the pearl fishery, but also those interested in the history of the region and the origins of the Gulf states, and in the colourful story of the global taste for one of mankind's most highly prized precious stones.
