FINALIST FOR THE NATIONAL BOOK CRITICS CIRCLE AWARD AND THE PEN ART OF THE ESSAY AWARD
Over the past decade and a half, Daniel Mendelsohn's reviews for *The New York Review of Books*, *The New Yorker*, and *The New York Times Book Review* have earned him a reputation as "one of the

greatest critics of our time" (Poets & Writers). In *Waiting for the Barbarians*, he brings together twenty-four of his recent essays—each one glinting with "verve and sparkle," "acumen and passion"—on a wide range of subjects, from *Avatar* to the poems of Arthur Rimbaud, from our inexhaustible fascination with the Titanic to Susan Sontag's *Journals*. Trained as a classicist, author of two internationally best-selling memoirs, Mendelsohn moves easily from penetrating considerations of the ways in which the classics continue to make themselves felt in contemporary life and letters (Greek myth in the *Spider-Man* musical, Anne Carson's translations of Sappho) to trenchant takes on pop spectacles—none more explosively controversial than his dissection of *Mad Men*. Also gathered here are essays devoted to the art of fiction, from Jonathan Littell's Holocaust blockbuster *The Kindly Ones* to forgotten gems

like the novels of Theodor Fontane. In a final section, "Private Lives," prefaced by Mendelsohn's *New Yorker* essay on fake memoirs, he considers the lives and work of writers as disparate as Leo Lerman, Noël Coward, and Jonathan Franzen. *Waiting for the Barbarians* once again demonstrates that Mendelsohn's "sweep as a cultural critic is as impressive as his depth."

Trust is a core concept in International Relations (IR), representing a key ingredient in state relations. It was only relatively recently that IR scholars began to probe what trust really is, how it can be studied, and how it affects state relations. In the process three distinct ways of theorising trust in IR have emerged: trust as a rational choice calculation, as a social phenomenon or as a psychological dimension. Trust in International Relations explores trust through these different lenses using case studies to analyse the relative strengths and

weaknesses of different approaches. The case studies cover relations between: United States and India ASEAN and Southeast Asian countries Finland and Sweden USA and Egypt The European Union and Russia Turkey ' s relations with the West This book provides insights with real-world relevance in the fields of crisis and conflict management, and will be of great interest for students and scholars of IR, security studies and development studies who are looking to develop a more sophisticated understanding of how different theories of trust can be used in different situations.

Making Electricity Resilient Oxford University Press

A thorough exposition of quantum computing and the underlying concepts of quantum physics, with explanations of the relevant mathematics and numerous examples. The combination of two of the twentieth century's most influential and revolutionary scientific theories, information theory and quantum mechanics, gave rise to a radically new view of computing and information. Quantum information processing explores the implications of using quantum mechanics instead of classical mechanics to model information and its processing. Quantum computing is not about changing the physical

substrate on which computation is done from classical to quantum but about changing the notion of computation itself, at the most basic level. The fundamental unit of computation is no longer the bit but the quantum bit or qubit.

This comprehensive introduction to the field offers a thorough exposition of quantum computing and the underlying concepts of quantum physics, explaining all the relevant mathematics and offering numerous examples. With its careful development of concepts and thorough explanations, the book makes quantum computing accessible to students and professionals in mathematics, computer science, and engineering. A reader with no prior knowledge of quantum physics (but with sufficient knowledge of linear algebra) will be able to gain a fluent understanding by working through the book.

Energy risk and security have become topical matters in Western and international policy discussions; ranging from international climate change mitigation to investment in energy infrastructures to support economic growth and more sustainable energy provisions. As such, ensuring the resilience of more sustainable energy infrastructures against disruptions has become a growing concern for high-level policy makers. Drawing

on interviews, participant observation, policy analysis, and survey research, this book unpacks the work of the authorities, electricity companies, and lay persons that keeps energy systems from failing and helps them to recover from disruptions if they occur. The book explores a number of important issues: the historical security policy of energy infrastructures; control rooms where electricity is traded and maintained in real time; and electricity consumers in their homes. Presenting case studies from Finland and Scandinavia, with comparisons to the United States, the United Kingdom, and the European Union at large, *Making Electricity Resilient* offers a detailed and innovative analysis of long-term priorities and short-term dynamics in energy risk and resilience. This book will be of great interest to students and scholars of energy policy and security, and science and technology studies.

A top behavioral geneticist makes the case that DNA inherited from our parents at the moment of conception can predict our psychological strengths and weaknesses. In *Blueprint*, behavioral geneticist Robert Plomin describes how the DNA revolution has made DNA personal by giving us the power to predict our psychological strengths and weaknesses from birth. A century of genetic research shows that DNA differences inherited from our parents are the consistent life-long sources of our psychological individuality—the blueprint that makes us who we are. This, says Plomin, is a game changer. Plomin has been working on these issues for almost fifty years, conducting longitudinal studies of twins and adoptees. He reports that genetics explains more of the psychological differences among people than

all other factors combined.

Genetics accounts for fifty percent of psychological differences—not just mental health and school achievement but all psychological traits, from personality to intellectual abilities. Nature, not nurture is what makes us who we are. Plomin explores the implications of this, drawing some provocative conclusions—among them that parenting styles don't really affect children's outcomes once genetics is taken into effect. Neither tiger mothers nor attachment parenting affects children's ability to get into Harvard. After describing why DNA matters, Plomin explains what DNA does, offering readers a unique insider's view of the exciting synergies that came from combining genetics and psychology.

The authors here provide a detailed treatment of the design of robust adaptive controllers for nonlinear systems with uncertainties. They employ a new tool based on the ideas of system immersion and manifold invariance. New algorithms are delivered for the construction of robust asymptotically-stabilizing and adaptive control laws for nonlinear systems. The methods proposed lead to modular schemes that are easier to tune than their counterparts obtained from Lyapunov redesign. *Quantum Computing* Verso Books Discover the skills and knowledge to design powerful websites right now with Campbell 's prominent WEB DESIGN: INTRODUCTORY, 6E.
