Building Soils for Better Crops John Wiley & Sons

This ground-breaking anthology collects poems written by Australian poets who are migrants, their children, and refugees of Asian heritage, spanning work that covers over three decades of writing. Inclusive of hitherto marginalised voices, these poems explore the hyphenated and variegated ways of being Asian Australian, and demonstrate how the different origins and traditions transplanted from Asia have generated new and different ways of being Australian. This anthology highlights the complexity of Asian Australian interactions between cultures and languages, and is a landmark in a rich, diversely-textured and evolving story. Timely and proactive this anthology fills existing cultural gaps in poetic expressions of home, travel, diaspora, identity, myth, empire and language.

The revised edition of the bestselling textbook, covering both classical and molecular plant breeding Principles of Plant Genetics and Breeding integrates theory and practice to provide an insightful examination of the fundamental principles and advanced techniques of modern plant breeding. Combining both classical and molecular tools, this comprehensive textbook describes the multidisciplinary strategies used to produce new varieties of crops and plants, particularly in response to the increasing demands to of growing populations. Illustrated chapters cover a wide range of topics, including plant reproductive systems, germplasm for breeding, molecular breeding, the common objectives of plant breeders, marketing and societal issues, and more. Now in its third edition, this essential textbook contains extensively revised content that reflects recent advances and current practices. Substantial updates have been made to its molecular genetics and breeding sections, including discussions of new breeding techniques such as zinc finger nuclease, oligonucleotide directed mutagenesis, RNA-dependent DNA methylation, reverse breeding, genome editing, and others. A new table enables efficient comparison of an expanded list of molecular markers, including Allozyme, RFLPs, RAPD, SSR, ISSR, DAMD, AFLP, SNPs and ESTs. Also, new and updated "Industry Highlights" sections provide examples of the practical application of plant breeding methods to real-world problems. This new edition: Organizes topics to reflect the stages of an actual breeding project Incorporates the most recent technologies in the field, such as CRISPR genome edition and grafting on GM stock Includes numerous illustrations and end-of-chapter self-assessment questions, key references, suggested readings, and links to relevant websites Features a companion website containing additional artwork and instructor resources Principles of Plant Genetics and Breeding offers researchers and professionals an invaluable resource and remains the ideal textbook for advanced undergraduates and graduates in plant science, particularly those studying plant breeding, biotechnology, and genetics.

Toward Sustainable Agricultural Systems in the 21st Century Simon and Schuster

COVID-19 is the most significant global crisis of any of our lifetimes. The numbers have been stupefying, whether of infection and mortality, the scale of public health measures, or the economic consequences of shutdown. Coronavirus Politics identifies key threads in the global comparative discussion that continue to shed light on COVID-19 and shape debates about what it means for scholarship in health and comparative politics. Editors Scott L. Greer, Elizabeth J. King, Elize Massard da Fonseca, and Andr e Peralta-Santos bring together over 30 authors versed in politics and the health issues in order to understand the health policy decisions, the public health interventions, the social policy decisions, their interactions, and the reasons. The book's coverage is global, with a wide range of key and exemplary countries, and contains a mixture of comparative, thematic, and templated country studies. All go beyond reporting and monitoring to develop explanations that draw on the authors' expertise while engaging in structured conversations across the book.

Barley is one of the world's most important crops with uses ranging from food and feed production, malting and brewing to its use as a model organism in molecular research. The demand and uses of barley continue to grow and there is a need for an up-to-date comprehensive reference that looks at all aspects of the barley crop from taxonomy and morphology through to end use. Barley will fill this increasing void. Barley will stand as a must have reference for anyone researching, growing, or utilizing this important crop.

Electronic publishing and electronic means of text and data presentation have changed enormously since the first edition of this book was published in 1997. The third edition of Scientific Papers and Presentations applies traditional principles to today's modern techniques and the changing needs of up-and-coming academia. Topics include designing visual aids, writing first drafts, reviewing and revising, communicating clearly and concisely, adhering to stylistic principles, presenting data in tables and figures, dealing with ethical and legal issues, and relating science to the lay audience. This successful legacy title is an essential guide to professional communication, provides a wealth of information and detail and is a useful guide. Covers all aspects of communication for early scientists from research to thesis to presentations. Discusses how to use multi-media effectively in presentations and communication Includes an extensive appendices section with detailed examples for further guidance

DOCAT is "revealing the secret" to young people around the world. DOCAT helps young people to know and live Catholic Social Teaching. It's a great, practical follow up to YOUCAT, the hugely popular Youth Catechism, based on the Catechism of the Catholic Church. Drawing on Scripture, YOUCAT, the Catechism, and the Compendium of Catholic Social Teaching, DOCAT shows young people how to work toward building a "civilization of love". Features include: • Popular Q & A YOUCAT style, tackles tough questions about social justice and related issues • Lots of full-color photos with young people and others • Inspirational and insightful quotes, including comments from St John Paul II, Mother Teresa, Pope Francis, Pope Benedict • Written with help from church leaders, business leaders, social activists, and young people • Guides young people in conscience formation and Catholic action on social and political issues

Conquering Chemistry: HSC course (book with CD-ROM) Pascal Press

In the last 20 years, there has been a remarkable emergence of innovations and technological advances that are generating promising changes and opportunities for sustainable agriculture, yet at the same time the agricultural sector worldwide faces numerous daunting challenges. Not only is the agricultural sector expected to produce adequate food, fiber, and feed, and contribute to biofuels to meet the needs of a rising global population, it is expected to do so under increasingly scarce natural resources and climate change. Growing awareness of the unintended impacts associated with some agricultural production practices has led to heightened societal expectations for improved environmental, community, labor, and animal welfare standards in agriculture. Toward Sustainable Agricultural Systems in the 21st Century assesses the scientific evidence for the strengths and weaknesses of different production, marketing, and policy approaches for improving and reducing the costs and unintended consequences of agricultural production. It discusses the principles underlying farming systems and practices that could improve the sustainability. It also explores how those lessons learned could be applied to agriculture in different regional and international settings, with an emphasis on sub-Saharan Africa. By focusing on a systems approach to improving the sustainability of U.S. agriculture, this book can have a profound impact on the development and implementation of sustainable farming systems. Toward Sustainable Agricultural Systems in the 21st Century serves as a valuable resource for policy makers, farmers, experts in food production and agribusiness, and federal regulatory agencies.

Social policy reforms driven by profound social changes have been a popular and pressing topic worldwide in recent years in both policy and academic circles. In this book, prominent social policy scholars from Europe, North America, and Asia discuss the history of social policies, compare different social development models, and analyze the challenges facing these economies' social policy reforms. The book provides comprehensive and comparative perspectives and updated data on social development and social policy reforms in the world's major economies, and particularly, in mainland China.

"This book offers the first significant examination of the rise of neo-nationalism and its impact on the missions, activities, behaviors, and productivity of leading national universities. This book also presents the first major comparative exploration of the role of national politics and norms in shaping the role of universities in nation-states, and vice versa, and discusses when universities are societal leaders or followers-in promoting a civil society, facilitating talent mobility, in researching challenging social problems, or in reinforcing and supporting an existing social and political order"--

The Oxford Handbook of Food, Politics, and Society JHU Press

Sustainability rests on the principle that we must meet the needs of the present without compromising the ability of future generations to meet their own needs. Starving people in poor nations, obesity in rich nations, increasing food prices, on-going climate changes, increasing fuel and transportation costs, flaws of the global market, worldwide pesticide pollution, pest adaptation and resistance, loss of soil fertility and organic carbon, soil erosion, decreasing biodiversity, desertification, and so on. Despite unprecedented advances in sciences allowing to visit planets

and disclose subatomic particles, serious terrestrial issues about food show clearly that conventional agriculture is not suited any longer to feed humans and to preserve ecosystems. Sustainable agriculture is an alternative for solving fundamental and applied issues related to food production in an ecological way. While conventional agriculture is driven almost solely by productivity and profit, sustainable agriculture integrates biological, chemical, physical, ecological, economic and social sciences in a comprehensive way to develop new farming practices that are safe and do not degrade our environment. In that respect, sustainable agriculture is not a classical and narrow science. Instead of solving problems using the classical painkiller approach that treats only negative impacts, sustainable agriculture treats problem sources. As most actual society issues are now intertwined, global, and fast-developing, sustainable agriculture will bring solutions to build a safer world. This book gathers review articles that analyze current agricultural issues and knowledge, then propose alternative solutions. It will therefore help all scientists, decision-makers, professors, farmers and politicians who wish to build a safe agriculture, energy and food system for future generations.

Handbook for Academic Authors Academic Press

'...an outstanding achievement that will, with its skill and elegance, deeply enrich Australian poetry and whoever reads it.' Judges' citation, 2013 NSW Premier's Literary Award for Poetry. Ali Cobby Eckermann, a Yankunytjatjara/Kokatha poet, is at the forefront of Australian Indigenous poetry. Inside My Mother is both a political and personal collection, angry and tender, propelled by the need to remember, yet brimming with energy and vitality - qualities that distinguished her previous, prize-winning verse novel, Ruby Moonlight. Tributes to country, to her elders, and to the animals and spirits that inhabit the landscape, coupled with the rhythms of mourning and celebration that pulse through the poems, make this a moving and personal collection. Grief is deeply felt and vividly portrayed in poems such as 'Inside My Mother' and 'Lament'. There is defiance and protest in 'Clapsticks' and 'I Tell You True'. In the final section there is a marked generational shift as the elders begin to pass away and the poet as grandmother comes to accept her rightful place as matriarch.

Genetics and Genomics of Setaria CRC Press

Due to the rapid increase in world population and improving living standards, the global agriculture sector is confronting with challenges for the sustainability of agricultural production and of the environment. Intensive high-yield agriculture is typically dependent on addition of fertilizers (synthetic chemicals, animal manure, etc.). However, non-point nutrient losses from agricultural fields due to fertilization could adversely impact the environment. Increased knowledge on plant nutrient chemistry is required for improving utilization efficiency and minimizing losses from both inorganic and organic nutrient sources. For this purpose, the book is composed of 19 chapters that highlight recent research activities in applied nutrient chemistry geared toward sustainable agriculture and environment. Topics of interest include, but are not limited, to speciation, quantification, and interactions of various plant nutrients and relevant contributors in manure, soil, and plants. This book outlooks emerging researchable issues on alternative utilization and environmental monitoring of manure and other agricultural by products that may stimulate new research ideas and direction in the relevant fields.

This book focuses on International migration among the Chinese long before European colonists set foot on the Asian continent. Long before European colonists set foot on the Asian continent, the Chinese moved across sea and land, seasonally or permanently, to other parts of Asia and the rest of the world to pursue economic opportunities and alternative means of livelihood. This volume addresses the new Chinese diasporas around the world, offering a snapshot of the cosmopolitan and shifting nature of Chinese population dynamics from the perspectives of anthropologists, sociologists, and scholars of international studies.

While Americans are generally aware of China's ambitions as a global economic and military superpower, few understand just how deeply and assertively that country has already sought to influence American society. As the authors of this volume write, it is time for a wake-up call. In documenting the extent of Beijing's expanding influence operations inside the United States, they aim to raise awareness of China's efforts to penetrate and sway a range of American institutions: state and local governments, academic institutions, think tanks, media, and businesses. And they highlight other aspects of the propagandistic "discourse war" waged by the Chinese government and Communist Party leaders that are less expected and more alarming, such as their view of Chinese Americans as members of a worldwide Chinese diaspora that owes undefined allegiance to the so-called Motherland. Featuring ideas and policy proposals from leading China specialists, China's Influence and American Interests argues that a successful future relationship requires a rebalancing toward greater transparency, reciprocity, and fairness. Throughout, the authors also strongly state the importance of avoiding casting aspersions on Chinese and on Chinese Americans, who constitute a vital portion of American society. But if the United States is to fare well in this increasingly adversarial relationship with China, Americans must have a far better sense of that country's ambitions and methods than they do now.

The International Treaty on Plant Genetic Resources for Food and Agriculture (ITPGRFA) is a pivotal piece of recent legislation, providing a route map for the use of such resources for sustainable agriculture and food security. Plant Genetic Resources and Food Security explains clearly the different interests and views at stake between all players in the global food chain. It touches upon many issues such as international food governance and policy, economic aspects of food and seed trade, conservation and sustainable use of food and agricultural biodiversity, hunger alleviation, ecological concerns, consumers' protection, fairness and equity between nations and generations, plant breeding techniques and socio-economic benefits related to food local economies. The book shows that despite the conflicting interests at stake, players managed to come to an agreement on food and agriculture for the sake of food security and hunger alleviation in the world. Published with the Food and Agriculture Organization (FAO) of the United Nations and with Bioversity International.
