Written by leading experts in the field, this book offers an introduction to recent developments in port and hinterland strategies, operations and related specializations. The book begins with a broad overview of port definitions, concepts and the role of ports in global supply chains, and an examination of strategic topics such as port management,

---

governance, performance, hinterlands and the port-city relationship. The second part of the book examines operational aspects of maritime, port and land networks. A range of topics are explored, such as liner networks, finance and business models, port-industrial clusters, container terminals, intermodality/synchromodality, handling and warehousing. The final section of the book provides insights into key issues of port development and management, from security, sustainability, innovation strategies, transition management and labour issues. Drawing on a variety of global case studies, theoretical insights are supplemented with real world and best practice examples, this book will be of interest to advanced undergraduates, postgraduates, scholars and professionals interested in maritime studies, transport studies, economics

and geography. *Mastering Import and Export Management* Boskage Commerce Publications "A real world tool for helping develop effective marketing strategies and plans." -- Dennis Dunlap, Chief Executive Officer, American Marketing Association "For beginners and professionals in search of answers." -- Stephen Joel Trachtenberg, President Emeritus and University Professor of Public Service, The George Washington University "A 'must read' for every business major and corporate executive." -- Clarence Brown, former Acting Secretary, U.S. Department of Commerce *The Biggest Companies. There are a lot of reasons  
why companies go global.  
A particular foreign  
market may present a  
greater profitability  
opportunity than the local  
market of the business.  
Perhaps, the business  
has reached the tipping  
point in its export  
business and the market  
has grown large enough  
to merit an additional  
manufacturing facility or  
partner in another  
country. Maybe access to  
skilled, lower-cost  
workers is an attraction.  
Possibly setting up a local  
shop in a foreign market  
will help circumvent trade  
barriers that are  
constraining the  
company's growth. The  
book is for small to  
medium enterprises  
(SME), a business that

---

has grown beyond the “start-up venture”. The SME would be an ongoing business, with employees, receivables, and payables. It has a business growth plan, and as the manager, you know what business you are in and have the resources to expand. SMEs typically do not have a cadre of specialists, particularly where logistics and trade compliance are concerned. Those duties are most likely being added to existing staff with similar domestic responsibilities. However, realize that global is not the same as local business, it is outside of common knowledge and there are matters that managers need to understand better so they do not make serious

mistakes in the process of going global. Published by Buoyant Capital, NYC (c) 2016

This book consists of a collection of works on utilizing the automatic identification technology provided by Radio Frequency Identification (RFID) to address the problems of global counterfeiting of goods. The book presents current research, directed to securing supply chains against the efforts of counterfeit operators, carried out at the Auto-ID Labs around the globe. It assumes very little knowledge on the

part of the reader on Networked RFID systems as the material provided in the introduction familiarizes the reader with concepts, underlying principles and vulnerabilities of modern RFID systems. Marine Navigation and Safety of Sea Transportation Buoyant Capital

Each Trade Policy Review consists of three parts: a report by the government under review, a report written independently by the WTO Secretariat, and the concluding remarks by the chair of the Trade Policy Review Body. A highlights section provides an overview of key trade facts. 15 to 20 new review titles are published each year. The reviews consist of detailed chapters examining the trade policies and practices of the member and describing trade policy-making institutions and the macroeconomic situation; these chapters are preceded by the Secretariat's Summary Observations, which summarize the report and presents the Secretariat's perspective on the member's trade policies.

---

The Secretariat report and the member's policy statement are published after the review meeting, along with the minutes of the meeting and the text of the Chairperson's Concluding Remarks.

Real borders can be thick. They are not dimensionless lines as typically assumed in theoretical models and standard empirical analyses, but a zone populated by agencies that develop and administer regulations firms have to comply with when engaging in international

trade, many of which have their own procedures. Borders can then easily become a labyrinth hard to get through. This is crucial because border agencies' procedures influence the time needed to ship goods from their origins to their destinations and can thereby affect trade, particularly in a context characterized by increasingly segmented production chains and rising lean retailing. Latin American and Caribbean countries have recently implemented various trade facilitation initiatives that aim to streamline the administrative processing of trade flows and accordingly reduce trading times. These initiatives include risk management, single windows, authorized economic operators, simplified postal exports, and expedited transit arrangements, all of which are cornerstones of the 2013 WTO Agreement on

---

Trade Facilitation and have been subject of multiple international organizations' operations. Despite of being ubiquitous, evidence on the impact of these specific initiatives has been extremely limited. Lack of precise data has been a major obstacle. Out of the Border Labyrinth fills this gap and sheds entirely new light on the trade effects of such trade facilitation measures and the channels thereof. It presents the results of thorough impact evaluations, which have been carried out by applying rigorous methods on unprecedented transaction-level data for several countries in the region. These results reveal that trade actually expanded as a consequence of such facilitation measures and that the primary channel has been shipping frequency. Based on these econometric examinations and careful institutional case studies, Out of the Border Labyrinth systematizes a new line of trade policy research and informs policymaking and assistance activities by international organizations by providing tools that will help design and assess policies in an area that will be very active in upcoming years as countries work towards implementing the multilateral agreement reached in Bali.

This publication introduces a portable audit model to facilitate a simple, flexible, and effective audit of single or multiple quality system standards and achieve both

compliance and initiation of improvement initiatives. This model is similar to a universal adaptor plug, allowing easy connection and interchangeability of the multiple standards even under rapid system changes typical of modern day operations. This universal plug will allow focus on compliance verification and improvement at a high level of consistency with minimum process disruption and cost. Emphasis is not only on compliance but also on improvement partnership with operations through the use of strategy models. These strategy models will help accentuate the

---

internal audit role as a dynamic element and catalyst for improvement. Real life-based challenges (masked identity) are used in case studies to demonstrate the application of typical internal audit methodologies combined with an implementation engine such as Lean auditing strategies. This will clarify theories that are commonly viewed as abstract by the novice and, in some cases, misunderstood by experienced professionals. This is the breakthrough from a dormant internal audit program into a proactive tool for added value improvement. Lean methodology is

integrated through simple models that don't require one to be a Lean or Black Belt guru. The focus is using logical sense to understand and apply the concept. The author's lessons learned during more than 25 years of hands-on quality management experience in environments including manufacturing, medical devices, military, aerospace, automotive, and logistics are condensed in this book to provide reference material to both beginners and seasoned professionals in the development and sustainability of an effective quality and operational system. Experiences shared in this book include the design

---

from ground zero-to-deployment, risk mitigation, and maintenance of quality standards such as ISO 9001, AS9100, ISO/TS 16949, TL 9000, FDA/GMP and C-TPAT standard, and Lean Six Sigma principles. The main focus of this book is to promote the use of the internal auditing tool as a feedback mechanism not only for compliance verification but also for the measurement and enhancement of the system's effectiveness. The catalysts for this goal are: Auditing beyond compliance to include identification of improvement opportunities Use of process metrics as feedback mechanism in the discovery of hidden factories and risks Concepts and models discussed in this book are clearly illustrated using anonymous real-life examples encountered in day-to-day operations. These examples include

lessons learned associated with compliance, continuous improvement, and techniques in the conversion of performance metrics as process indicators, savings generators, and risk mitigation. The examples and models are simple and easy to understand accompanied with templates for quick application on the creation of problem statements, root cause analysis methods, and design of action plans with measurement of success. Workshop modules for training the trainers are included in this book with practical hands-on exercises on the different tools associated with problem solving, development of process metrics for risk mitigations and auditing.
