**#1 NEW YORK TIMES BEST SELLER** • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade

---

investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As

Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach. Plunkett's Insurance Industry Almanac Plunkett Research, Ltd. The insurance industry is rebounding from its poor financial results of a few years ago. The leading cause of death on Planet Earth is Metabolic Syndrome. Some 40% of all Earthlings now suffer from this condition which covers the gamut of Heart Disease, Cancer, Neurodegeneration, Liver disease, and PCOS.

What is worth knowing is that ALL of these and related conditions start with Fatigue, known in scientific circles as "energy deficiency." 40% of the Earth's population has a formal clinical diagnosis that their mitochondria cannot make adequate levels of energy. [Cu]re Fatigue is a book devoted to educating the masses and their doctors exactly how and why this is happening. Our mitochondria make energy by a series of enzymes to work synergistically to create ATP, the cellular currency of energy. These mitochondrial enzyme reactions rely on minerals that are easily lost to stress. This book explains these concepts, how these challenges can be overcome and introduces the reader to a simple, proven Root Cause Protocol that is designed to generate more energy and

end fatigue. This book is designed for those seeking the truth in human metabolism and those wanting to take back control of their health. It is one part textbook and one part user's guide based on a decade of research and client experience.

One of the greatest entrepreneurial success stories of the past twenty years When a friend told Bernie Marcus and Arthur Blank that "you've just been hit in the ass by a golden horseshoe," they thought he was crazy. After all, both had just been fired. What the friend, Ken Langone, meant was that they now had the opportunity to create the kind of wide-open warehouse store that would help spark a consumer revolution through low prices, excellent customer service, and wide availability of products. Built from Scratch is the story of how two incredibly determined and creative people—and their associates—built a business from nothing to 761 stores and \$30 billion in sales in a mere twenty years. Built from Scratch tells many colorful stories associated with The Home Depot's founding and meteoric rise; shows that a

company can be a tough, growth-oriented competitor and still maintain a high sense of responsibility to the community; and provides great lessons useful to people in any business, from start-ups to the Fortune 500.
