As one of the oldest costume jewelry companies still in existence, Monet has, for almost 70 years, made jewelry that cannot be surpassed for its quality, craftsmanship, and audacious design. Monet: The Master Jewelers is a long overdue, in-depth look at this innovative and enduring company. Through comprehensive research, little known facts about Monet and its founders, Michael and Joseph Chernow, as well as the people behind it, are revealed for the first time. Misconceptions about the company's origins and its early years are finally corrected. This is also a visual celebration of the artistry of Monet jewelry throughout the decades. Delving well beyond basic gold necklaces and earrings, you will be overwhelmed by the diversified and unique

styling of the many bracelets, charms, earrings, and necklaces Monet pioneered throughout their long history. The Monet experience is further explored through vintage magazine and newspaper advertisements, patents, rare company and family photos, as well as never-before-published memorabilia from the early Monocraft years. Collectors, dealers, designers, stylists, and anyone with an appreciation of costume jewelry and its history will find this book to be a valuable and must-have reference.

Introducing a NEW addition to our growing library of computer science titles, Algorithm Design and Applications, by Michael T.

Goodrich & Roberto Tamassia! Algorithms is a course required for all computer science majors, with a strong focus on theoretical topics. Students enter the course after gaining hands-on experience with computers, and are expected to learn how algorithms can be applied to a variety of contexts. This new book integrates application with theory. Goodrich & Tamassia believe that the best way to teach algorithmic topics is to present them in a context that is motivated from applications to uses in society, computer games, computing industry, science, engineering, and the internet. The text teaches students about designing and using algorithms, illustrating connections between topics being taught and their potential applications, increasing engagement.

New York Times bestselling author Rachel Gibson returns with this dazzling love story filled with sizzle, sass, and just a bit of southern charm . . . "Hello, Ms. Vivian . . . it's been a long time." And with those words, Vivian Leigh Rochet nearly melted. It's been years since she last saw Harrison Whitley-Shuler. She was a teenager scrubbing houses for a living. He was the gorgeous son of rich parents, not fit for the likes of her. Vivian had vowed to get out of Charleston, become a big Hollywood star, and stick it to the snooty girls who made her cry. She got what she wanted—and more—but why does her glamorous life seem so trivial? Harrison got out too . . . making it all the way to Wall Street, until a heart attack forced him to

trade in his cufflinks for a good set of hand tools. Making furniture soothes his soul, but escaping the Whitley-Shuler heritage is nearly impossible. And now he's come face-to-face with the one who got away. He's not looking for love. He's not even looking for sex . . . so why is resisting her the hardest thing he's ever done?

With such a wide diversity of properties and applications, is it any wonder that industry and academia have such a fascination with polymers? A solid introduction to such an enormous and important field is critical to the modern polymer scientist-to-be, but most of the available books do not stress practical problem solving or include recent advances. Serving as the polymer book for the new millennium, Introduction to Polymer Science and Chemistry: A Problem Solving Approach unites the fundamentals of polymer science and polymer chemistry in a seamless presentation.

Emphasizing polymerization kinetics, the author uses a unique question-and-answer approach when developing theory or introducing new concepts. The first four chapters introduce polymer science, focusing on physical and molecular properties, solution behavior, and molecular weights. The remainder of the book explores polymer chemistry, devoting individual, self-contained chapters to the main types of polymerization reactions: condensation; free radical; ionic; coordination; and ring-opening. It introduces recent advances such as supramolecular polymerization, hyperbranching, photoemulsion polymerization, the grafting-from polymerization process, polymer brushes, living/controlled radical polymerization, and immobilized metallocene catalysts. With numerical problems accompanying the discussion at every step along with numerous end-of-chapter exercises, Introduction to Chemical Polymer Science: A Problem Solving Approach is an ideal introductory text and self-study vehicle for mastering the principles and methodologies of modern polymer

science and chemistry.

Following successful adaptations of Matilda and Charlie and the Chocolate Factory, Roald Dahl's The Twits has been mischievously adapted for the stage by the brilliantly inventive playwright Enda Walsh. Dahl's funniest, stinkiest book is turned upside down, as Walsh--best known for adapting the film Once into an internationally acclaimed musical--brings this revolting revolution thrillingly to life.

Tamy Tazi has set her own special mark of distinction on contemporary Moroccan dress: ceremonial or everyday caftans, djellabas, selhams (capes), jackets and serouals Her models embrace two remarkable traditions that both resist the pressures of time. One is the Haute

Couture that has long been Tamy Tazi's daily bread as Yves Saint-Laurent's representative in Morocco. The other is the Moroccan heritage, but not that growing out of the early days Moroccan independence with its glimmers of women's emancipation. Tazi has researched a deeper, more singular tradition, stripping it of folksiness and revitalising it. The union of these two vital sources, each inseminating the other with a grammar that is as articulate as it is festive, has generated a new style in caftans that daringly distinguish themselves from either parent. This book will not only appeal to caftan fans, but to anyone with interest in Morocco culture and fashion.

Introduction to Polymer Science and Chemistry I K International Pvt Limited For junior/senior-level courses in Systems Analysis or Systems Analysis and Economics as applied to civil engineering. With a reorganization and new material, the Second Edition of this acclaimed text is designed to enhance the student's learning experience by providing exposure to modeling ideas and concepts. Network flow problems are emphasized by highlighting their study separately from the general integer programming models that are considered. With a wider range of examples and exercises that conclude many chapters, this text offers students an extremely practical, accessible study on the most modern skills available for the design, operation and evaluation of civil and environmental engineering systems. The Australian Official Journal of Trademarks Simon and Schuster Open publication The volume deals with previously undescribed morphosyntactic variations and changes appearing in settings involving language contact. Contact-induced changes are defined as

dynamic and multiple, involving internal change as well as historical and sociolinguistic factors. A variety of explanations are identified and their relationships are analyzed. Only a multifaceted methodology enables this fine-grained approach to contact-induced change. A range of methodologies are proposed, but the chapters generally have their roots in a typological perspective. The contributors recognize the precautionary principle: for example, they emphasize the difficulty of studying languages that have not been described adequately and for which diachronic data are not extensive or reliable. Three main perspectives on contact-induced language change are presented. The first explores the role of multilingual speakers in contact-induced language change, especially their spontaneous innovations in discourse. The second explores the differences between ordinary contact-induced

change and change in endangered languages. The third discusses various aspects of the relationship between contact-induced change and internal change.

Steam, and then cumbersome motor,
tractors existed in small numbers before
1914, after which the need to produce
