A mathematical puzzle book that involves labeling points or edges on three types of graphs: (1) polycubes, which consist of cubes attached face-to-face, (2) polyhexes, which consist of regular hexagons joined edge to edge, and (3) triangulations, which consist of triangles attached edge to edge. For a polycube with  $n$  points, the puzzle consists of labeling each vertex with the full set of integers (mod  $n$ ),  $(\mathbb{Z}_n)$  so that the four labels belonging to each face of every component cube have the same sum. For a polyhex with  $n$  points, the vertices are to be labeled with elements from  $\mathbb{Z}_n$  so that the six labels assigned to each component hexagon have the same sum. For puzzles involving triangulation, the edges, instead of the vertices, are to be labeled with elements of  $\mathbb{Z}_n$ . To solve the puzzle, a labeling must be found so that the edges of each component triangle have the same sum. Unlike sudoku, these puzzles have many solutions; the solutions provided in the back of the book are included just to show that a solution exists. Readers are encouraged to create and solve their own puzzles in any of the three genres. Questions of mathematical interest are provided throughout.
