### **White Fragility** Waveland Press

The New York Times best-selling book exploring the counterproductive reactions white people have when their assumptions about race are challenged, and how these reactions maintain racial inequality. In this "vital, necessary, and beautiful book" (Michael Eric Dyson), antiracist educator Robin DiAngelo deftly illuminates the phenomenon of white fragility and "allows us to understand racism as a practice not restricted to 'bad people'" (Claudia Rankine). Referring to the defensive moves that white people make when challenged racially, white fragility is characterized by emotions such as anger, fear, and guilt, and by behaviors including argumentation and silence. These behaviors, in turn,

function to reinstate white racial equilibrium and prevent any meaningful cross-racial dialogue. In this in-depth exploration, DiAngelo examines how white fragility develops, how it protects racial inequality, and what we can do to engage more constructively. *Living Through Injury in Gangland Chicago* Createspace Independent Publishing Platform

This book is the outstanding and most frequently cited work in the field of Anthropology. It made the author world-famous and established her as the leader in her field for the next 50 years. One of the reasons this book became so famous was her observation that young Samoan women deferred marriage for many years while enjoying casual sex before eventually choosing a husband. This led to the Sexual Revolution that swept America in the 1960s and brought about the establishment of the Sexual Freedom League and other organizations. The Free Love generation idolized Margaret Mead.

**THE ESSENCE OF ANTHROPOLOGY** features an experienced and diverse author team with expertise in all subfields of anthropology. With an eye to visual and written clarity, the authors present anthropology from an integrated, holistic perspective. They use three unifying themes as a framework to tie the book together and keep students focused: systemic adaptation to emphasize that every culture, past and present, is an integrated and dynamic system of adaptation; biocultural connections that highlight the integration of human culture and biology in the steps

humans take to meet the challenges of survival; and the emergence of globalization and its disparate impact on peoples and cultures around the world. Pedagogical elements support these main themes and give deeper insight into the meaning and relevance of a wide range of topics covered in the general narrative by tying examples to behavior today. Insightful questions foster critical thinking, additional Visual Counterpoints widen the book's array of compare-and-contrast examples, and a new Digging into Anthropology feature provides a hands-on approach to anthropological methods by giving active learning opportunities related to each chapter's content. In addition, the authors have broadened viewpoints to offer explanations and examples from different points of view. Cultural Anthropology: 101 Cengage Learning

There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

Scientific Research in Education McGraw-Hill

*Victims of Progress*, now in its sixth edition, offers a compelling account of how technology and development affect indigenous peoples throughout the world. Bodley's expansive look at the struggle between small-scale indigenous societies, and the colonists and corporate developers who have infringed their territories reaches from 1800 into today. He examines major issues of intervention such as social engineering, economic development, self-determination, health and disease, global warming, and ecocide. Small-scale societies, Bodley convincingly demonstrates, have survived by organizing politically to defend their basic human rights. Providing a provocative context in which to think about civilization and its costs—shedding light on how we are all victims of progress—the sixth edition features expanded discussion of “uprising politics,” Tebtebba (a particularly active indigenous

organization), and voluntary isolation. A wholly new chapter devotes full coverage to the costs of global warming to indigenous peoples in the Pacific and the Arctic. Finally, new appendixes guide readers to recent protest petitions as well as online resources and videos.
