The primary mission  
of the bridge  
erection boat (BEB)

---

is to assist U.S. Army Multi-Role Bridge Company (MRBC) units in maneuvering, construction, and operation of the improved ribbon bridge (IRB) during bridging and rafting operations. As a secondary function, the BEB can be used for safety boat, troop and cargo transport, and patrol and

reconnaissance missions. The BEB is a 27- by 8-ft aluminum hull, twin engine, twin hydrojet powered vessel. The XM20 BEB is powered by twin Cummins 6BTA 5.9-L, six-cylinder, four-cycle 260-hp marine diesel engines equipped with in-line fuel injection pumps. Testing was performed from 27 November 2007

through 17 January 2008 at Spesutie Narrows Waterway, U.S. Army Aberdeen Test Center (ATC). This test was a follow-on effort to U.S. Army Test and Evaluation Command (ATEC) Project No. 2006-DT-ATC-BEBSX-D1897. The test objective was to determine if the Cummins XM20 engine and in-line fuel injection pump configuration were

With a focus on ecology, economy and engine performance, diesel engines are explored in relation to current research and developments. The prevalent trends in this development are

outlined with particular focus on the most frequently used alternative fuels in diesel engines; the properties of various type of biodiesel and the concurrent improvement of diesel engine characteristics using numeric optimization alongside current investigation and research work in the field. Following of a short overview of engine control, aftertreatment and alternative fuels, Green Diesel Engine explores the effects of biodiesel usage on injection, fuel spray, combustion, and tribology characteristics, and engine

performance. Additionally, optimization procedures of diesel engine characteristics are discussed using practical examples and each topic is corroborated and supported by current research and detailed illustrations. This thorough discussion provides a solid foundation in the current research but also a starting point for fresh ideas for engineers involved in developing/adjusting diesel engines for usage of alternative fuels, researchers in renewable energy, as well as to engineers, advanced undergraduates, and

postgraduates.
