Qualitative researchers have long made use of many different interview forms. Yet, for novice researchers, making the connections between "theory" and "method" is not always easy. This book provides a theoretically-informed guide for researchers learning how to interview in the social sciences. In order to undertake quality research using qualitative interviews, a researcher must be able to theorize the application of interviews to investigate research problems in social science research. As part of this process, researchers examine their subject positions in relation to participants, and examine their interview interactions systematically to inform research design. This book provides a practical approach to interviewing, helping researchers to learn about themselves as interviewers in ways that will inform the design, conduct, analysis and representation of interview data. The author takes the reader through the practicalities of designing and conducting an interview study, and relates various forms of interview to different underlying epistemological assumptions about how knowledge is produced. The book concludes with practical advice and perspectives from experienced researchers who use interviews as a method of data generation. This book is written for a multidisciplinary audience of students of qualitative research methods.

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in

seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.
