In this book, Louise Revell examines questions of Roman imperialism and Roman ethnic identity and explores Roman imperialism as a lived experience based around the paradox of similarity and difference. Her case studies of public architecture in several urban settings provides an understanding of the ways in which urbanism, the emperor and religion were part of the daily

encounters of the peoples in these communities. Revell applies the ideas of agency and practice in her examination of the structures that held the empire together and how they were implicated within repeated daily activities. Rather than offering a homogenized "ideal type" description of Roman cultural identity, she uses these structures as a way to understand how these encounters differed between communities and within communities, thus producing a more nuanced interpretation of what it was to be Roman.

Bringing an innovative approach to the problem of Romanization, Revell breaks from traditional models and cuts across a number of entrenched debates such as arguments about the imposition of Roman culture or resistance to Roman rule.

Qualitative researchers have long made use of many different interview forms. Yet, for novice researchers, making the connections between "theory" and "method" is not always easy. This book provides a theoretically-informed guide for researchers learning how to interview in the social sciences. In order to undertake quality research using qualitative interviews, a researcher must be able to theorize the application of interviews to investigate research problems in social science research. As part of this process, researchers examine their subject positions in relation to participants, and examine their interview interactions systematically to inform research design. This book provides a practical approach to interviewing, helping researchers to learn about themselves as interviewers in ways that will inform the design, conduct, analysis and representation of interview data. The author takes the reader through the practicalities of designing and conducting an interview study, and relates various forms of interview to different underlying epistemological assumptions about how knowledge is produced. The book concludes with practical advice and perspectives from experienced researchers who use interviews as a method of data generation. This book is written for a multidisciplinary audience of students of qualitative research methods.
