Students who are beginning studies in technology need a strong foundation in the basics before moving on to more advanced technology courses and certification programs. The Microsoft Technology Associate (MTA) is a new and innovative certification track designed to provide a pathway for future success in technology courses and careers. The MTA program curriculum helps instructors teach and validate fundamental technology concepts and provides students with a foundation for their careers as well as the confidence they need to succeed in advanced studies. Through the use of MOAC MTA titles you can help ensure your students future success in and out of the classroom. This text covers the fundamentals of local area networking, defining networks with the OSI Model and understanding wired and wireless networks. In addition it includes understanding Internet Protocol, implementing TCP/IP and working with networking services. Your students will better understand wide area networks along with defining network infrastructures and network security.

Cities are perhaps one of humanity's most complex creations, never finished, never definitive. They are like a journey that never ends. Their evolution is determined by their ascent into greatness or their descent into decline. They are the past, the present and the future. Cities contain both order and chaos. In them reside beauty and ugliness, virtue and vice. They can bring out the best or the worst in humankind. They are the physical manifestation of history and culture and incubators of innovation, industry, technology, entrepreneurship and creativity. Cities are the materialization of humanity's noblest ideas, ambitions and aspirations but when not planned or governed properly, can be the repository of society's ills. Cities drive national economies by creating wealth, enhancing social development and providing employment but they can also be the breeding grounds for poverty, exclusion and environmental degradation. The 21st Century is the Century of the City. Half of humanity now lives in cities, and within the next two decades, 60 per cent of the world's people will reside in urban areas. How can city planners and policymakers harmonize the various interests, diversity and inherent contradictions within cities? What ingredients are needed to create harmony between the physical, social, environmental and cultural aspects of a city and the human beings that inhabit it? This report adopts the concept of Harmonious Cities as a theoretical framework in order to understand today's urban world, and also as an operational tool to confront the most important challenges facing urban areas and their development processes. It recognizes that tolerance, diversity, social justice and good governance, all of which are inter-related, are as important to sustainable urban development as physical planning. It addresses national concerns by searching for solutions at the city level. For that purpose, it focuses on three key areas: spatial or regional harmony, which examines the main drivers of urban growth in the developing world and explores the spatial nuances of economic and social policies; social harmony, which presents and analyzes new data on urban inequalities worldwide and describes the types of shelter deprivations experienced by slum dwellers in developing world regions; and environmental harmony, which examines the role of cities in the climate change debate, and the impact of global warming on the most vulnerable cities. The report also assesses the various intangible assets within cities that contribute to harmony, such as cultural heritage, sense of place and memory and the complex set of social and symbolic relationships that give cities meaning. It argues that these intangible assets represent the soul of the city and are as important for harmonious urban development as tangible assets. Harmony within cities, argues the report, is both a journey and a destination. Published with UN-HABITAT

Buried Lives Career Examination Passbooks

This study used an iterative Delphi survey process of about 600 faculty, employers, and policymakers to identify writing, speech and listening, and critical thinking skills that college graduates

should achieve to become effective employees and citizens (National Education Goal 6). Participants reached a consensus about the importance in critical thinking of the ability to detect: indirect persuasion including the use of leading questions that are biased towards eliciting a preferred response, use of misleading language, use of slanted definitions or comparisons, and instances where irrelevant topics or considerations are brought into an argument to divert attention from the original issue. With regard to effective writing respondents thought that graduates should be able to use active or passive voice where appropriate, use correct grammar, use specific language conventions of their academic discipline, and use language that their audience understands. With regard to speech communication skills respondents reached agreement about the importance of information exchange, conversation management, group communication, and using and understanding spoken English and non-verbal signs. Extensive tables detail the Delphi survey results. (Contains 168 references.) (JB)

Rooted in the work of community – school collaborations, this text focuses on connecting the rigors of the classroom with the ambiguity of lived community experience. Community-Based Transformational Learning (CBTL) draws on the increasing evidence that course-learning conducted in an applied, community setting, can positively transform students' professional and personal identity and creates new ways of thinking and working in university courses and pre-professional experiences. To illustrate the different ways to successfully implement community-based learning, examples are provided of experiences integrated in courses across multiple disciplines across an American university whose mission is focused on teaching. Topics covered include refugee and immigration transition issues, incarceration and health needs with international examples of community experiences from Jamaica, Korea and Belize. Qualitative and quantitative data depict how these experiences impact students and each chapter presents how community engagement has been established as an effective approach in the different disciplines, including computer science and sports management. The authors demonstrate how CBTL experiences can be transformative when students are provided a chance to connect the academic commitment to community aims, but also provides suggestions for overcoming challenges and pit-falls in developing these experiences.

In the United States, broad study in an array of different disciplines – arts, humanities, science, mathematics, engineering – as well as an in-depth study within a special area of interest, have been defining characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven, in part, by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century. Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today, many leaders, scholars, parents, and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary "silos". These "silos" represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics, and medicine (STEMM) lead to improved educational and career outcomes for undergraduate and graduate students. It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEMM education programs.

Who Do You Serve, Who Do You Protect? Bloomsbury Publishing
Buried Lives offers the first critical examination of the experience of

imprisonment in early America. These interdisciplinary essays investigate several carceral institutions to show how confinement shaped identity, politics, and the social imaginary both in the colonies and in the new nation. The historians and literary scholars included in this volume offer a complement and corrective to conventional understandings of incarceration that privilege the intentions of those in power over the experiences of prisoners. Considering such varied settings as jails, penitentiaries, almshouses, workhouses, floating prison ships, and plantations, the contributors reconstruct the struggles of people imprisoned in locations from Antigua to Boston. The essays draw upon a rich array of archival sources from the seventeenth century to the eve of the Civil War, including warden logs, petitions, execution sermons, physicians' clinical notes, private letters, newspaper articles, runaway slave advertisements, and legal documents. Through the voices, bodies, and texts of the incarcerated, Buried Lives reveals the largely ignored experiences of inmates who contested their subjection to regimes of power.

Occupying Disability: Critical Approaches to Community, Justice, and Decolonizing Disability Cambridge University Press

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

The True Story of a White Boy Who Discovered He Was Black Wiley

Lists some seven thousand trade associations, labor unions, professional, scientific, or technical societies and other national organizations. The directory is arranged alphabetically (by name of organization), as well as geographically, and by subject, acronym, management firm, and executives. Harmonious Cities Addison-Wesley

An essential guide to recognizing bogus numbers and misleading data Numbers are often intimidating, confusing, and even deliberately deceptive—especially when they are really big. The media loves to report on millions, billions, and trillions, but frequently makes basic mistakes or presents such numbers in misleading ways. And misunderstanding numbers can have serious consequences, since they can deceive us in many of our most important decisions, including how to vote, what to buy, and whether to make a financial investment. In this short, accessible, enlightening, and entertaining book, Brian Kernighan teaches anyone—even diehard math-phobes—how to demystify the numbers that assault us every day. Giving you the simple tools you need to avoid being fooled by dubious numbers, Millions, Billions, Zillions is an essential survival guide for a world drowning in big—and often bad—data.

Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation Princeton University Press

This book explores the concept of "occupation" in disability well beyond traditional clinical formulations of disability: it considers disability not in terms of pathology or impairment, but as a range of unique social identities and experiences that are shaped by visible or invisible diagnoses/impairments, socio-cultural perceptions and environmental barriers and offers innovative ideas on how to apply theoretical training to real world contexts. Inspired by disability justice and "Disability Occupy Wall Street / Decolonize Disability" movements in the US and related movements abroad, this book builds on politically engaged critical approaches to disability that intersect occupational therapy, disability studies and anthropology. "Occupying Disability" will provide a discursive space where the concepts of disability, culture and occupation meet critical theory, activism and the creative arts. The concept of "occupation" is intentionally a moving target in this book. Some chapters discuss occupying spaces as a form of protest or alternatively, protesting against territorial occupations. Others present occupations as framed or problematized within the fields of occupational therapy and occupational science and anthropology as engagement in meaningful activities. The contributing authors come from a variety of professional, academic and activist backgrounds to include perspectives from theory, practice and experiences of disability. Emergent themes include: all the

permutations of the concept of "occupy," disability justice/decolonization, marginalization and minoritization, technology, struggle, creativity and change. This book will engage clinicians, social scientists, activists and artists in dialogues about disability as a theoretical construct and lived experience.

State of the World's Cities 2008/9 Univ of California Press

This book analyzes reliable evidence to tell the true story of student debt in America. One of the nation's foremost experts on college finance, Sandy Baum exposes how misleading the widely accepted narrative on student debt is. Baum combines data, research, and analysis to show how the current discourse obscures serious problems, risks misdirecting taxpayer dollars, and could deprive too many Americans of the educational opportunities they deserve. This book and its policy recommendations provide the basis for a new and more constructive national agenda to make paying for college more manageable.

Princeton for the Nation's Service Career Examination Passbooks

What is the reality of policing in the United States? Do the police keep anyone safe and secure other than the very wealthy? How do recent police killings of young black people in the United States fit into the historical and global context of anti-blackness? This collection of reports and essays (the first collaboration between Truthout and Haymarket Books) explores police violence against black, brown, indigenous and other marginalized communities, miscarriages of justice, and failures of token accountability and reform measures. It also makes a compelling and provocative argument against calling the police. Contributions cover a broad range of issues including the killing by police of black men and women, police violence against Latino and indigenous communities, law enforcement's treatment of pregnant people and those with mental illness, and the impact of racist police violence on parenting, as well as specific stories such as a Detroit police conspiracy to slap murder convictions on young black men using police informant and the failure of Chicago's much-touted Independent Police Review Authority, the body supposedly responsible for investigating police misconduct. The title *Who Do You Serve, Who Do You Protect?* is no mere provocation: the book also explores alternatives for keeping communities safe. Contributors include William C. Anderson, Candice Bernd, Aaron Cantú, Thandi Chimurenga, Ejeris Dixon, Adam Hudson, Victoria Law, Mike Ludwig, Sarah Macaraeg, and Roberto Rodriguez.

Financial Aid for Higher Education Foundation Center

This book surveys the major commercially available, scientific parallel computers with emphasis on how they are programmed. For each machine, the way in which parallel performance can be assessed is shown for the same small example program. The book will appeal to programmers, managers, and students in computer science and other disciplines with an interest in understanding the state of the art in software tools for programming the current generation of parallel processors.

National Norms Fall 2009 Franklin Classics Trade Press

“ Heartbreaking and uplifting... a searing book about race and prejudice in America... brims with insights that only someone who has lived on both sides of the racial divide could gain. ” —Cleveland Plain Dealer “ A triumph of storytelling as well as a triumph of spirit. ” —Alex Kotlowitz, award-winning author of *There Are No Children Here* As a child in 1950s segregated Virginia, Gregory Howard Williams grew up believing he was white. But when the family business failed and his parents' marriage fell apart, Williams discovered that his dark-skinned father, who had been passing as Italian-American, was half black. The family split up, and Greg, his younger brother, and their father moved to Muncie, Indiana, where the young boys learned the truth about their heritage. Overnight, Greg Williams became black. In this extraordinary and powerful memoir, Williams recounts his remarkable journey along the color line and illuminates the contrasts between the black and white worlds: one of privilege, opportunity and comfort, the other of deprivation, repression, and struggle. He tells of the hostility and prejudice he encountered all too often, from both blacks and whites, and the surprising moments of encouragement and acceptance he found from each. *Life on the Color Line* is a uniquely important book. It is a wonderfully inspiring testament of purpose, perseverance, and human triumph. Winner of the Los Angeles Times Book Prize

Grabbing Power explores the history of agribusiness and land conflicts in Northern Honduras focusing on the Aguán Valley, where peasant movements battle large palm oil producers for the right to land. In the wake of a military coup that overthrew Honduran president Manuel Zelaya in June 2009, rural communities in the Aguán have been brutally repressed, with over 60 people killed in just over two years. United States military aid--spent in the name of the War on Drugs--fuels the Honduran government's ability to repress its people. A strong and inspiring movement for land, food and democracy has grown over the last two years, and it shows no sign of backing down.
