## **F.T.C. Statistical Report on Mergers and Acquisitions**

Butterworth-Heinemann

A vital electronics industry can boost a country's economic growth, provide jobs for skilled workers, and speed development in other sectors. This report shows how to build a modern and competitive electronics industry. It gives step-by-step advice on the market conditions, enterprise strategies, and government policies that can create a successful electronics sector. The editors suggest guidelines to help countries identify competitive segments of industry. They explain why

prospects lie in products for industry, computers, and telecommunications. Their advice points out which products countries should focus on initially. It recommends ways to expand, once basic production and skills are established. The role government must play in developing the physical infrastructure and a skilled work force is examined and major trends in the global electronics industry are reviewed in detail. The collection focuses on semiconductors, computers, consumer electronics, and telecommunications. It examines how electronics developed in advanced industrial economies while electronics industries in selected developing economies and newly industrialized economies are also evaluated. The report explores the roles played by foreign investment and technological development. It describes key government interventions that prepared private enterprises--and labor markets--for market competition. The book points out government interventions and industry practices that hampered efficiency and growth and gives practical advice on improving public policies and boosting industry performance.

Prize-winning True Stories of the Supreme Moment—When Men Suddenly Face Death Some of these true stories are already famous because they have been dramatized on television. All of them take you straight to the heart of great moments of crisis. You'll know what it's like to look down at the wide Pacific and realize that your plane is going to ditch there. You'll twist the wheel of your racing car as it takes a narrow turn at Indianapolis. You'll struggle in cabin 56 of the S.S. Andrèa Doria during its five last frantic hours. In these and other stories, Cornelius Ryan, ace journalist, has caught the essence of that split-second that may be a man's last. Two of these pieces have won Benjamin Franklin Magazine awards. "One Minute To Ditch!"—Thirty-one men, women and children high over the mid-Pacific in a failing plane. (Dramatized on TV.) Five Desperate Hours in Cabin 56—A story of the sinking of the S.S. Andrèa Doria told in gripping minute-by-minute detail. (Dramatized on TV.) The Major of St. Lô—A classic of the Normandy invasion, an unforgettable true story of quiet heroism. (Dramatized on TV.) These and other factual accounts are moving documents of crisis: of courage against the sudden fact of very possible death.

Cornell University is fortunate to have as its historian a man of Morris Bishop's talents and devotion. As an accurate record and a work of art possessing form and personality, his book at once conveys the unique character of the early university—reflected in its vigorous founder, its first scholarly president, a brilliant and eccentric faculty, the hardy student body, and, sometimes unfortunately, its early architecture—and establishes Cornell's wider significance as a case history in the development of higher education. Cornell began in

rebellion against the obscurantism of college education a century ago. Its record, claims the author, makes a social and cultural history of modern America. This story will undoubtedly entrance Cornellians; it will also charm a wider public. Dr. Allan Nevins, historian, wrote: "I anticipated that this book would meet the sternest tests of scholarship, insight, and literary finish. I find that it not only does this, but that it has other high merits. It shows grasp of ideas and forces. It is graphic in its presentation of character and idiosyncrasy. It lights up its story by a delightful play of humor, felicitously expressed. Its emphasis on fundamentals, without pomposity or platitude, is refreshing. Perhaps most important of all, it achieves one goal that in the history of a living university is both extremely difficult and extremely valuable: it recreates the changing atmosphere of time and place. It is written, very plainly, by a man who has known and loved Cornell and Ithaca for a long time, who has steeped himself in the traditions and spirit of the institution, and who possesses the enthusiasm and skill to convey his understanding of these intangibles to the reader." The distinct personalities of Ezra Cornell and first president Andrew Dickson White dominate the early chapters. For a vignette of the founder, see Bishop's description of "his" first buildings (Cascadilla, Morrill, McGraw, White, Sibley): "At best," he writes, "they embody the character of Ezra Cornell, grim, gray, sturdy, and economical." To the English historian, James Anthony Froude, Mr. Cornell was "the most surprising and venerable object I have seen in America." The first faculty, chosen by President White, reflected his character: "his idealism, his faith in social emancipation by education, his dislike of dogmatism, confinement, and inherited orthodoxy"; while the "romantic upstate gothic" architecture of such buildings as the President's house (now Andrew D. White Center for the Humanities), Sage

Chapel, and Franklin Hall may be said to "portray the taste and Soul of Andrew Dickson White." Other memorable characters are Louis Fuertes, the beloved naturalist; his student, Hugh Troy, who once borrowed Fuertes' rhinoceros-foot wastebasket for illicit if hilarious purposes; the more noteworthy and the more eccentric among the faculty of succeeding presidential eras; and of course Napoleon, the campus dog, whose talent for hailing streetcars brought him home safely—and alone—from the Penn game. The humor in *A History of Cornell* is at times kindly, at times caustic, and always illuminating.

Since the introduction of balloon angioplasty for the relief of coronary artery stenoses and of anginal symptoms in patients with coronary artery disease by Andreas Griintzig in 1977, the field of interventional technology and treatment strategies has grown enormously. For the reduction of hemodynamically significant coronary artery stenoses balloon angioplasty is the standard and reference method with a high primary success and low complication rate. Because of the relatively high recurrence rates of 30-40% of balloon angioplasty a whole family of different angioplasty techniques has been developed since then. Among those are atherectomy devices, laser angioplasty, radiofrequency angioplasty, high and low speed rotational angioplasty and stenting of stenosed vessels. Balloon angioplasty has been extended to aortic

and mitral valve stenoses, and supraventricular and ventricular tachycardias can now be treated by catheter ablation techniques. In 1989 an International Symposium on standard and newer interventional techniques has been held at the University of Ulm. This volume contains the essential parts and presentations of the international faculty of experts in the field. In four chapters the principles, advantages, pitfalls and future developments of coronary angioplasty, angioplasty of peripheral arteries, balloon valvuloplasty and of catheter ablation of supraventricular and ventricular tachycardias are described in detail. We hope that this 'State-of-the-Art' representation will be of great value for both the non expert reader and the active researcher in the fields addressed within the book. V. Hombach, M. The purpose of the ordnance corps is to support the development, production, acquisition and sustainment of equipment-including weapons systems and munitions- and to provide explosive ordnance disposal (EOD), during peace and war, to provide superior combat power to the United States (U.S.) Army. The ordnance corps has a rich and robust history of supporting the force dating back from the American Revolution to present day. The future of our nation and Army will continue to be engaged in an era of "persistent conflict" a period of protracted confrontation among states, non-state, and individual actors increasingly willing to use violence to achieve their political and ideological ends. The ordnance corps must evolve and remain the indispensable sustainment warfighting function in order for the Army to successfully execute simultaneous and protracted operations. Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important

book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.
