This book provides an overview of effectively collecting, understanding, and presenting information. First, this book examines various situations via math, grammar, and logic. It is important for officers to apply math and English to the law so that they may be able to effectively articulate their actions in court. For example, laws and police actions can be evaluated via truth tables and Venn Diagrams. Second, this book discusses interrogation techniques and body language. Manipulating a suspect and collecting the right information in a legal and effective manner is a part of police work. Third, this book presents a deposition. The defense lawyer may ask certain questions in order to discredit the officer or to undermine the officers report. Police officers should ask themselves the purpose of each question that is being asked during a deposition. Fourth, this book presents some resume information and typical job interview questions for potential police officers. Knowing what kinds of questions will be asked during an interview and effectively communicating to potential employers is essential. Fifth, this book discusses code information and handwriting comparisons. Code information may be important in a prison environment and handwriting comparisons allows for a totality of circumstance exercise.

Sixth, this book discusses assumptions and limitation associated with information. Magic is a useful tool to demonstrate how flawed assumptions may lead to inaccurate conclusions. Seventh, this book provides a table that can be used to generate impromptu speeches. Various words can be randomly selected and the reader can use the words to create a short story. Eighth, this book discusses how to handle situations that deal with special situations and individuals who have disabilities. Finally, this book discusses various search techniques for evidence collection.

As future generation information technology (FGIT) becomes specialized and fr- mented, it is easy to lose sight that many topics in FGIT have common threads and, because of this, advances in one discipline may be transmitted to others. Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole. Of particular interest are hybrid solutions that c- bine ideas taken from multiple disciplines in order to achieve something more signi- cant than the sum of the individual parts. Through such hybrid philosophy, a new principle can be discovered, which has the propensity to propagate throughout mul- faceted disciplines. FGIT 2009 was the first mega- conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT, conducted by separate scientific committees, but

coordinated in order to expose the most important contributions. It included the following international conferences: Advanced Software Engineering and Its Applications (ASEA), Bio-Science and Bio-Technology (BSBT), Control and Automation (CA), Database Theory and Application (DTA), Disaster Recovery and Business Continuity (DRBC; published independently), Future Generation Communication and Networking (FGCN) that was combined with Advanced Communication and Networking (ACN), Grid and Distributed Computing (GDC), Multimedia, Computer Graphics and Broadcasting (MulGraB), Security Technology (SecTech), Signal Processing, Image Processing and Pattern Recognition (SIP), and e-Service, Science and Technology (UNESST).

A person can lawfully engage in an act restricted by copyright if they have the licence of the copyright owner or if their actions are covered by a statutory exception. However, if a person has the benefit of neither of these, it may still be possible to imply a copyright licence to respond to copyright infringement. In contrast to the rigidity of the statutory exceptions, implied licences are more malleable in being able to respond to a diverse set of circumstances, as the need arises. Thus, implied licences can serve as a flexible and targeted mechanism to

balance competing interests, including those of the copyright owners and content users, especially in today's dynamic technological environment. However, implication as a process is contentious, and there are no established principles for implying copyright licences. The resulting uncertainty has prevented implied licences from being embraced more readily by the courts. Therefore, this book develops a methodical and transparent way of implying copyright licences, based on three sources: the consent of the copyright owner; an established custom; and state intervention to achieve policy goals. The frameworks proposed are customised separately for implying bare and contractual licences, where relevant. The book goes on to analyse the existing case law in the light of these frameworks to demonstrate how the court's reasoning can be made methodical and transparent. Underscoring the contemporary relevance of implied licences, this book tests and validates the methodology in relation to three essential and ubiquitous functions on the internet - browsing, hyperlinking, and indexing.
