The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal

component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

This volume brings together researchers in conversation analysis who examine the practice of alternating between English and German, Italian, Spanish, Swedish and Vietnamese in the classroom. The collection shows that language alternation is integral to being and learning to become a bilingual, and that being and learning to become a bilingual are accomplished through a remarkably common set of interactional objects and actions, whose sequential organisations are quite similar across languages and educational sectors. This volume therefore shows that having recourse to more than one shared language provides an important resource for getting the work of language learning and teaching done through an orderliness that can be described and evaluated. The findings and the suggested pedagogical applications described in the volume will be of significant interest to researchers and teachers in a range of fields including second and foreign language teaching and learning, conversation analysis, teacher education and bilingualism.
