This timely and important book illuminates the impact of cyber law on the growth and development of emerging and developing economies. Using a strong theoretical framework firmly grounded in resource-based and technology diffusion literature, the authors convey a subtle understanding of the ways public and private sector entities in developing and emerging countries adopt cyber space processes. This book reveals that the diffusion of cyber activities in developing and emerging economies is relatively low, with the main stumbling blocks resting in regulatory, cultural, and social factors. The authors argue that cyber crimes constitute a prime obstacle to the diffusion of e-commerce and e-governments in developing economies, and governments have an important role in developing control mechanisms in the form of laws. However, setting appropriate policies and complementary services, particularly those affecting the telecommunications sector and other infrastructure, human capital and the investment environment, severely constrains Internet access. Using both strategic and operational perspectives, the authors discuss the concrete experience of constructing and implementing cyber laws and cyber security measures in developing and emerging countries, and analyse their content and appropriateness. Professionals, academics, students, and policymakers working in the area of cyber space, e-commerce and economic development, and United Nations entities working closely with the Millennium Development Goals, will find this book an invaluable reference.

Since the 9/11 attacks, international organizations have become actively engaged in devising counterterrorism strategies and frameworks. This monograph examines the role UN organs can play in implementing the law of State responsibility in global security contexts, using transnational terrorism as its principal case study. The institutional mechanisms utilized by the UN in implementing State responsibility are assessed in detail, shedding light on how the ICJ, the General Assembly and the Security Council contribute to the implementation of State responsibility in the context of global security. By acknowledging the Security Council's role as a post-9/11 legislator, this book argues that the Council can play an important and sometimes determinant role in implementing a State's legal responsibility for failing to prevent terrorism, both inside and outside the Chapter VII framework. Featuring a discussion of the more controversial consequences flowing from State responsibility, this monograph also explores the prospect of injured States adopting forcible measures against responsible States for their failures to prevent terrorism. The book investigates whether self-defence and other forcible reactions, envisaged both inside and outside the Council, can be reconciled with State responsibility principles.

Drawing on a comparative approach, it encourages students to think through the issues of the application of Islamic law where Muslims live as a majority and where they live as a minority, including the USA, Saudia Arabia, Egypt, Pakistan. The book surveys the historical development as well as the contemporary contexts of Islamic law. In distilling the history

of Islamic law for non-specialists, the author covers important topics such as the development and transformation of Islamic institutions before and after colonialism. Coverage of Islamic law across contemporary contexts draws on real case material, and allows for discussion of Islam as a legal and a moral code that is activated both inside and outside the court. Readers will learn about rituals, dietary restrictions, family, contracts and property, lawful and unlawful gain, criminal law and punishments, and what makes a government legitimate in the eyes of Muslim individuals and authorities.

Until quite recently questions about methodology in legal research have been largely confined to

understanding the role of doctrinal research as a scholarly discipline. In turn this has involved asking questions not only about coverage but, fundamentally, questions about the identity of the discipline. Is it (mainly) descriptive, hermeneutical, or normative? Should it also be explanatory? Legal scholarship has been torn between, on the one hand, grasping the expanding reality of law and its context, and, on the other, reducing this complex whole to manageable proportions. The purely internal analysis of a legal system, isolated from any societal context, remains an option, and is still seen in the approach of the French academy, but as law aims at ordering society and influencing human behaviour, this approach is felt by many scholars to be insufficient. Consequently many attempts have been made to conceive legal research differently. Social scientific and comparative approaches have proven fruitful. However, does the introduction of other approaches leave merely a residue of 'legal doctrine', to which pockets of social sciences can be added, or should legal doctrine be merged with the social sciences? What would such a broad interdisciplinary field look like and what would its methods be? This book is an attempt to answer some of these questions.
