Inclusive Mathematics 11-18 Nelson Thornes

This is the second of a series of books based on the NCERT syllabus and research on the teaching of mathematics. The focus here is on an understanding of concepts and procedures. The concepts and procedures are presented by manipulatives, pictures, real-world situations, spoken and written words, and symbols and videos that enhance their learning. Opportunities are provided for communication, translation from one mode to another, and applications to daily life. The teachers should use manipulatives that are commercially available or can be made and use situations for exercises that are familiar to the children in the class. As most of the schools in India have a paucity of resources, we will use sticks for activities with number concepts. The sticks can be replaced by an abacus or base ten blocks. The schools that can afford should provide materials such as counters, Abacus, pattern blocks, geometrical models, geoboards, fake money, and use these for explaining concepts and procedures. If the schools/students cannot afford these, teachers can make models of different 2-D and 3-D shapes using cardboard and use dot paper instead of Geoboard. The students can be asked to bring buttons, scissors, and empty boxes, containers of different shapes and sizes from home. All children should at least have 100 sticks of the same length and rubber bands(they can buy pop sticks or toothpicks) and dot paper. As for most teachers, the textbook is the curriculum. This book is a teaching guide cum workbook for students. As the children have not yet developed the reading skills, the concepts, operations and word problems should be learnt and tested orally first. The exercises with manipulatives and oral work are included to facilitate that. Some activity sheets are also provided that can be printed and used by students.

Second Grade Math With Confidence

Instructor Guide (Math with Confidence)

Avichal Publishing Company

This third edition of Teaching Mathematics for the 21st Century continues to help teachers let the secret out—to open up to

their students the wonderful discoveries and challenges of the pattern-making and problem-solving aspects of a fascinating subject: mathematics. The rationale remains the same—to enable prospective and current teachers to access and use tools and strategies to effectively teach mathematics to contemporary students. Changing demographics, knowledge of how people learn, and technology all impact the way we educate our young people. This edition incorporates lessons and strategies from programs that have proven success in many types of classrooms. Many of these examples help students connect mathematics to real life situations and communicate their understanding of the underlying concepts. Although technology is constantly being upgraded, ways to increase student motivation through its application remains a goal. For example--since applets can enhance a lesson whether the teacher uses a computer projector, a “smart” board, or has students work individually on computers--we have identified several sources of mathematics applets that can be correlated to various lessons. Research citations and summaries have been updated to reflect current information on teaching and learning. For future teachers.
