Diccionario de Bolsillo de Etica Routledge

This book attempts to place a realist view of ethics (the claim that there are facts of the matter in ethics as elsewhere) within a broader context. It starts with a discussion of why we should mind about the difference between right and wrong, asks what account we should give of our ability to learn from our moral experience, and looks in some detail at the different sorts of ways in which moral reasons can combine to show us what we should do in the circumstances. The second half of the book uses these results to mount an attack on consequentialism in ethics, arguing that there are more sorts of reasons around than consequentialists can even dream of.

Dictionary of Global Bioethics Oxford University Press

"In this book the author adopts a historical approach to moral philosophy, taking in chronological sequence some of the major ethical philosophers of the past. The reader is introduced to the thoughts of each of them as a coherent and comprehensive ethical theory, whose richness and complexity is explored. Each theory is critically examined; each is presented as an attempt to surmount some of the deficiencies of its predecessor; and through this critical process the book moves towards some concluding suggestions about the content of an acceptable ethical theory. The book attempts in some measure to redraw the lines of the philosophical tradition so as to include not only Plato and Aristotle, Hume, Kant, and Mill, but also Hegelian ethics, and the contribution of Marx and Freud to our understanding of the nature and limits of morality. The book is intended for undergraduate students and the general reader, and is written in clear and non-technical language. It is structured so that it could conveniently be used as a basic text in an introductory course on ethics"--Page 4 of cover.
