AR 190-45 03/30/2007 LAW ENFORCEMENT REPORTING , Survival Ebooks Career Examination Passbooks ADP 6-22 describes enduring concepts of leadership through the core competencies and attributes required of leaders of all cohorts and all organizations, regardless of mission or setting. These principles reflect decades of experience and validated scientific knowledge. An ideal Army leader serves as a role model through strong intellect, physical presence, professional competence, and moral character. An Army leader is able and willing to act decisively, within superior leaders' intent and purpose, and in the organization's best interests. Army leaders recognize that organizations, built on mutual trust and confidence, accomplish missions. Every member of the Army, military or civilian, is part of a team and functions in the role of leader and subordinate. Being a good subordinate is part of being an effective leader. Leaders do not just lead subordinates--they also lead other leaders. Leaders are not limited to just those designated by position, rank, or authority.

The CIA is at the top of a cosmology of government and private concerns known collectively as the intelligence community. One of the most important components of this community is the U.S. Army Intelligence Center. Its mission is to provide information to commanders at all levels in the U.S. Army so that they are able to determine the capabilities of a foreign foe or act quickly on accurate, up-to-date intelligence. Now for the first time ever, the recently declassified U.S. Army Counterintelligence Handbook provides a rare look into the specialized and secretive world of military intelligence and counterintelligence procedure. Counterintelligence comprises efforts to determine what the enemy knows, efforts to keep friendly intelligence secret, and efforts to hamper the enemy's ability to collect and use intelligence. In this manual, the first four chapters provide counterintelligence information to the commander and his staff, while the remaining chapters cover the nuts and bolts of counterintelligence operations. The book includes everything from conducting background investigations to using field artillery to destroy stations. There is general

information, for instance, on evaluating assassination threats, contacting members of friendly resistance organizations, and how best to handle moles. There is advice on checking and keeping files, conducting searches, and the administration of lie detector tests. Also detailed are the ethics, legalities, and practical concerns of placing bugs, tapping telephones, and setting up listening posts for wireless intercepts, as well as the use of cameras and recorders. There is also information on tracking and connecting members of groups or cells, with advice on creating diagrams to illustrate the relationship among targets. The U.S. Army Counterintelligence Handbook is a must-read for anyone with an interest in today's difficult military intelligence questions, and it provides answers right from the source.

INTRODUCTION a. The value of all counterintelligence (CI) investigations is linked directly to the quality of reports such investigations yield. The finest investigative work loses its value if the CI Special Agent does not report the results accurately, clearly, and concisely. It is therefore paramount that all CI Special Agents devote a great deal of effort to ensure they become expert report writers. b. CI investigative reports transmit information to a regional control office to provide a record of investigative activities and help decision makers reach informed decisions about the direction an investigation should take. Failure to produce high quality reports could jeopardize national security interests and may result in the loss of American lives. A misguided investigation resulting from poor CI report writing can lead to the loss or destruction of US facilities, the successful carrying out of a terrorist act, or the loss or compromise of classified material, giving an opposing military force a decisive advantage over US Forces on the battlefield. c. The standardization of CI investigative report formats is designed to ensure the logical presentation of specific information, regardless of where, or by whom, the report is prepared. CI reports must present all available information to answer any and all reasonable questions reviewing authorities may need answered. d. Quality CI reports rely heavily upon the CI Special Agent's attention to detail. Readers of CI reports must understand fully and exactly what the CI Special Agent is reporting. The report becomes the sole source of information on that particular investigative activity. Reports must be: (1) Accurate: Accuracy is the most important characteristic of any report. Accuracy means precise, exact reporting and careful descriptions. The report must accurately reflect the facts furnished by the interviewee. If a Source expresses an opinion or belief which is not a known fact, you must report it as such. Reports must state exactly what the source saw, heard, said, and did. (2) Pertinent: Pertinent information relates directly to the investigation. It can be any information that leads to a better understanding of the facts and the persons involved. (3) Clear: The report must be logically organized and understandable. CI Special Agents must write sentences clearly to avoid any possible misinterpretation of the facts. You must emphasize ideas in a direct, uncomplicated style using standard, grammatically correct English, and simple wording. (4) Unbiased: An unbiased report includes all pertinent information about the incident under investigation. You must never omit information that does not support your view of the facts. You must do your best not to form your own opinion about what happened in order to remain an objective, impartial, and unbiased reporter of facts. (5) Concise: A concise report is straight to the point. Conciseness implies brevity, but does not dictate the length of the report, which will depend on the information available. While we should strive for brevity, we must never sacrifice accuracy or completeness in the process. (6) Complete: Reports must contain all the facts that answer the six basic interrogatives: WHO, WHAT, WHEN, WHERE, WHY, and HOW. The report must leave no unanswered questions. If you omit a single link in the chain of facts, decision makers may make incorrect decisions, the results of which could prove disastrous. Proofread all your completed reports and compare them to your notes. (7) Uniformity: Agencies write reports in very much the same format throughout the Department of Defense (with the exception of some regional differences based on geographical peculiarities). This ensures all persons who may read the report regardless of location easily understand the information.

How to Start a Business in Oregon DIANE Publishing

Requiring no more than a basic knowledge of abstract algebra, this text presents the mathematics of number fields in a straightforward, pedestrian manner. It therefore avoids local methods and presents proofs in a way that highlights the important parts of the arguments. Readers are assumed to be able to fill in the details, which in many places are left as exercises.
