Throughout the last several decades, Korean companies have entered the world markets in a wide range of manufacturing industries with great success. How did they achieve this exceptional performance? This book uncovers the secret of their performance through a comprehensive analysis of the Korean management system. It explains to an international audience how it has developed, why it works so well, and what non-Koreans can learn from it. The book analyzes the management of Korean firms from three different perspectives. First, a historical perspective is applied by showing how Tiger Management has emerged and how it has been continuously advanced over the last 50 years. The breathtaking stories of how Korean companies, seemingly coming from nowhere, have challenged their Western and Japanese competitors on the world markets are told. Second, the cornerstones of Tiger Management are analyzed from a functional viewpoint, showing that the success of Korean companies rests on a smart combination of business strategy, leadership, and human resource management practices. Finally, the present and future of Tiger Management is discussed by showing how Korean companies have adapted to changes in their business environment at home and abroad, and what non-Korean companies can learn from their Korean rivals. The book gives an up-to-date analysis of Korean management practices from a global perspective. It identifies the success factors of Korean companies: long term, aggressive and persisting business planning, speed, flexibility, strong leadership, strong teamwork, and high investment into human skills and capabilities. It illustrates how these management practices complement each other and provides non-Korean companies with signposts how they can adopt them.

The European Food Safety Agency (EFSA) has identified acrylamide as a public health concern due to its relation with the appearance of different types of cancer, and continued efforts are required to reduce exposure to acrylamide (EFSA, 2015). During the last few years, EFSA has maintained a high level of supervision to monitor the acrylamide levels in processed products, urging companies to implement effective mitigation strategies for reducing formation of this contaminant. Recently, the European Commission has published a regulation that sets mitigation measures for the reduction of this compound in foods, identifying new benchmark levels for a number of food categories (European Commission, 2017). The Regulation 2158/2017 compels food processors and food business operators in Europe to reduce the presence of acrylamide in their products, applying measures proportionate to the size and nature of the establishments. With the goal of providing information that contributes to our understanding for this process contaminant and exposure through dietary routes, this Special Issue explores the recent advances on the study of acrylamide in foods, including novel insights into the chemistry of its formation and elimination, effective mitigation strategies, conventional and innovative monitoring techniques, risk/benefit approaches, and exposure assessment.

The liberalization of trade and factor movements and the adoption of a common currency proposed for the EEC in 1992 have important implications for the rest of the world. Nineteen experts from academia, different countries and regions and international organizations analyze these implications theoretically and empirically. In general, the authors expect Europe 1992 to generate positive effects on trade and welfare, although concerns are raised over possible, inward looking policies by the Community. For many small and distant countries the effects are shown likely to be insignificant in any case.

Wineries are facing new challenges due to actual market demands for the creation of products exhibiting more particular flavors. In addition, climate change has lead to the requirement for grape varieties with specific features, such as convenient maturation times, enhanced tolerance towards dryness, osmotic stress, and resistance against plant-pathogens. The next generation of yeast starter cultures should produce wines with an appealing sensory profile and less alcohol. This Special Issue comprises actual studies addressing some of the problems and solutions for the environmental, technical, and consumer challenges of wine making today: Development of sophisticated mass spectroscopic methods enable the identification of the major metabolite spectrum of grapes/wine and deliver detailed insights in terroir and yeast-specific traits; Knowledge of the origin and reactions of reductive sulphur compounds facilitates the avoidance of unpleasant wine odors; Innovative physical – chemical treatments support effective and sustainable color extraction from red grape varieties; Enological enzymes from yeasts used directly or in the form of starter cultures are promising tools to increase the juice yields, color intensity, and aroma of wine; Natural and artificial Saccharomyces hybrids as well as collections of adapted wild isolates from various ecological niches will extend winemakers repertoire, allowing individual fermentations; Exact process control of wine fermentations by convenient computer programs will guarantee consistently high product quality.

The first volume of Paths to Contemporary French Literature offered a critical panorama of over fifty French writers and poets. With this second volume, John Taylor?an American writer and critic who has lived in France for the past thirty years?continues this ambitious and critically acclaimed project. Praised for his independence, curiosity, intimate knowledge of European literature, and his sharp reader's eye, John Taylor is a writer-critic who is naturally skeptical of literary fashions, overnight reputations, and readymade academic categories. Charting the paths that have lead to the most serious and stimulating contemporary French writing, he casts light on several neglected postwar French authors, all the while highlighting genuine mentors and invigorating newcomers. Some names (Patrick Chamoiseau, Pascal Quignard, Jean-Philippe Toussaint, Jean Rouaud, Francis Ponge, Aime Cesaire, Marguerite Yourcenar, J. M. G. Le Clezio) may be familiar to the discriminating and inquisitive American reader, but their work is

incisively re-evaluated here. The book also includes a moving remembrance of Nathalie Sarraute, and an evocation of the author's meetings with Julien Gracq. Other writers in this second volume are equally deserving authors whose work is highly respected by their peers in France yet little known in English-speaking countries. Taylor's pioneering elucidations in this respect are particularly valuable. This second volume also examines a number of non-French, originally non-French-speaking writers (such as Gherasim Luca, Petr Kral, Armen Lubin, Venus Ghoura-Khata, Piotr Rawicz, as well as Samuel Beckett) who chose French as their literary idiom. Taylor is in a perfect position to understand their motivations, struggles, and goals. In a day and age when so little is known in English-speaking countries about foreign literature, and when so little is translated, the two volumes of *Paths to Contemporary French Literature* are absorb

Dear flappable reader: Do you bristle at a handshake that resembles a limp fish? Do oblivious pedestrians bring you to the brink? What about museum gift shops, superfluous courtesy (do we need a gas pump to show us gratitude?), behemoth SUVs, or inexplicable operating manuals? Have you had it with screeching leaf blowers, beseeching telemarketers, escalating movie-ticket prices, or proliferating celebrity magazines? Is it children's choirs or karaoke singers, waiters bearing pepper grinders or dinner guests blathering on about salt, that drives you to distraction? For anyone who has recognized that this peaceful kingdom of ours has more than a few potholes, *101 Damnations* is the perfect companion. It's your ticket to the nine circles of personal hell. Armed with wit, bewilderment, and words to the wise ass, today's leading humorists conduct a brief tour of the trivial and often universal exasperations we all must endure. Among the damning, Henry Alford reveals our wanton desire to affect Britishisms. Sandra Tsing Loh has it in for people who forward "funny" e-mails. Once and for all, Merrill Markoe sets forth cell phone etiquette. And there are many, many others. Ninety-eight to be exact. Make yourself comfortable. Misery loves company.

PREFACE The Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture is involved in agricultural research and development and assists Member States of FAO and IAEA in improving strategies to ensure food security through the use of nuclear techniques and related biotechnologies, where such techniques have a valuable and often unique role. In particular, molecular diagnostic methods have rapidly evolved in the past twenty years, since the advent of the Polymerase Chain Reaction (PCR). They are used in a wide range of agricultural areas such as, improving soil and water management; producing better crop varieties; diagnosing plant and animal diseases; controlling insect pests and improving food quality and safety. The uses of nucleic acid-directed methods have increased significantly in the past five years and have made important contributions to disease control country programmes for improving national and international trade. These developments include the more routine use of PCR as a diagnostic tool in veterinary diagnostic laboratories. However, there are many problems associated with the transfer and particularly, the application of this technology. These include lack of consideration of: the establishment of quality-assured procedures, the required set-up of the laboratory and the proper training of staff. This can lead to a situation where results are not assured. This book gives a comprehensive account of the practical aspects of PCR and strong consideration is given to ensure its optimal use in a laboratory environment. This includes the setting-up of a PCR laboratory; Good Laboratory Practice and

standardised of PCR protocols.
