With complete coverage of Kingston as well as all the major resorts at Montego Bay, Ocho Rios, and Negril, this "Rough Guide" is the perfect complement to both independent travel and all-inclusive package tours. Comprehensive listings reveal the best places to stay, dine, and catch the funkiest reggae. of color maps & photos.

New Car Buying Guide Springer

In 1962, South Korea assembled just 1,100 new automobiles. By 1996, this total had soared to 2,812,714. What explains this remarkable growth? The answer is complex, and involves a combination of a supportive State, timely technology alliances, a skilled but historically low-paid workforce, aggressive pricing, savvy entrepreneurs, and fortuitous circumstances. Despite this amazing ascent, comparatively little has been written about the Korean auto industry in English. In the first of a two-volume set, this 11-chapter book seeks to help fill this void by providing in-depth examinations of all six of Korea ' s automakers from their beginnings through 1996. Uniquely written from the perspective of industry analysts at the time (without knowledge of the Asian Fiscal Crisis), the book should prove informative to practitioners, scholars, and students interested in automotive history, international political economy, Asian studies, and more.

Daewoo Nubira Springer Nature

Streamline technological integration with updated design The automotive industry is consistently confronted with new challenges in design and manufacturing. Total Vehicle Technology: Challenging Current Thinking highlights the ways in which current methods are evolving in the face of new technology, new legislation, and new consumer demands.

Integrating the latest technology into new designs requires consideration of cost, comfort, safety, environmental effects, and more; this book offers real-world solutions based on both new and established practices to provide insight for forward-looking automotive engineers.

Automobile Book 1999 Consumer Guide Books

This book covers a wide range of important topics including but not limited to Technology Trends, Computing, Artificial Intelligence, Machine Vision, Communication, Security, e-Learning, and Ambient Intelligence and their applications to the real world. The sixth Future Technologies Conference 2021 was organized virtually and received a total of 531 submissions from academic pioneering researchers, scientists, industrial engineers, and students from all over the world. After a double-blind peer review process, 191 submissions have been selected to be included in these proceedings. One of the meaningful and valuable dimensions of this conference is the way it brings together a large group of technology geniuses in one venue to not only present breakthrough research in future technologies, but also to promote discussions and debate of relevant issues, challenges, opportunities and research findings. We hope that readers find the book interesting, exciting, and inspiring; it provides the state-of-the-art intelligent methods and techniques for solving real-world problems along with a vision of the future research.

The Rough Guide to Jamaica Springer Nature

When gasoline prices rise, people notice: the news is filled with reports of pinched household budgets and politicians feeling pressure to do something to ameliorate the burden. Yet, raising the gasoline tax to internalize externalities is widely considered by economists to be among the most economic efficiency-improving policies we could implement in the transportation sector. This dissertation brings new evidence to bear on quantifying the responsiveness to changing gasoline prices, both on the intensive margin (i.e., how much to drive) and the extensive margin (i.e., what vehicles to buy). I assemble a unique and extremely rich vehicle-level dataset that includes all new vehicle registrations in California 2001 to 2009, and all of the mandatory smog check program odometer readings for 2002 to 2009. The full dataset exceeds 49 million observations.

Using this dataset, I quantify the responsiveness to gasoline price changes on both margins, as well as the heterogeneity in the responsiveness. I develop a novel structural model of vehicle choice and subsequent utilization, where consumer decisions are modeled in a dynamic setting that explicitly accounts for selection on unobserved driving preference at both the time of purchase and the time of driving. This utility-consistent model allows for the analysis of the welfare implications to consumers and government of a variety of different policies,

including gasoline taxes and feebates. I find that consumers are responsive to changing gasoline prices in both vehicle choice and driving decisions, with more responsiveness than in many recent studies in the literature. I estimate a medium-run (i.e., roughly two-year) elasticity of fuel economy with respect to the price of gasoline for new vehicles around 0.1 for California, a response that varies by whether the vehicle manufacturer faces a tightly binding fuel economy standard. I estimate a medium-run elasticity of driving with respect to the price of gasoline around -0.15 for new personal vehicles in the first six years. Older vehicles are driven much less, but tend to be more responsive, with an elasticity of roughly -0.3. I find that the vehicle-level responsiveness in driving to gasoline price changes varies by vehicle class, income, geographic, and demographic groups. I also find that not including controls for economic conditions and not accounting for selection into different types of new vehicles based on unobserved driving preference tend to bias the elasticity of driving away from zero -- implying a greater responsiveness than the true responsiveness. This is an important methodological point, for much of the literature estimating similar elasticities ignores these two issues. These results have significant policy implications for policies to reduce gasoline consumption and greenhouse gas emissions from transportation. The relatively inelastic estimated responsiveness on both margins suggests that a gasoline tax policy may not lead to dramatic reductions in carbon dioxide emissions, but is a relatively non-distortionary policy instrument to raise revenue. When the externalities of driving are considered, an increased gasoline tax may not only be relatively non-distortionary, but even economic efficiency-improving. However, I

find that the welfare changes from an increased gasoline tax vary significantly across counties in California, an important consideration for the political feasibility of the policy. Finally, I find suggestive evidence that the "rebound effect" of a policy that works only on the extensive margin, such as a feebate or CAFE standards, may be closer to zero than the elasticity of driving with respect to the price of gasoline. This suggestive finding is particularly important for the analysis of the welfare effects of any policy that focuses entirely on the extensive margin.

The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics.

Mobility in Daily Life

This volume chronicles the maturation of the South Korean auto industry and its native automakers, from the 1997 Asian Crisis to 2019. After examining the context for domestic vehicle production in South Korea, the author presents multiple case studies for all five Korean automakers: General Motors Korea/Daewoo Motors, Kia, Hyundai, Ssangyong and Renault Samsung. This includes coverage of Hyundai-Kia's foreign plants in North America, Europe, India, China, and Emerging Asia. The book closes by assessing the five-to-ten-year future outlooks for Korean automakers at home and abroad. This important work will prove informative to scholars of business, management, automotive history, international development, Asian studies, and public administration.

Kiplinger's Personal Finance
