In Tom Kundig: Works, the celebrated Seattle-based architect presents nineteen new projects, from Hawaii to New York City. Kundig's award-winning houses, known for their rugged yet elegant and welcoming style, are showcased in lush photography with drawings and sketches, and appear alongside his commercial work—from multistory complexes to the Tacoma Art Museum to a line of hardware (handles, door pulls, hinges, and more). In firsthand accounts, Kundig describes the projects and his design process with many personal anecdotes, making Tom Kundig: Works as much memoir as monograph. The book also includes an introduction by design editor Pilar Viladas and in-depth conversations with Kundig's frequent collaborators—"gizmologist" Phil Turner and contractor Jim Dow (Schuchart/ Dow)—and clients (Bigwood Residence and Studhorse).

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Using the accounts of fur traders, explorers, officials, and missionaries, Colin Yerbury documents the profound changes that swept over the Athapaskan-speaking people of the Canadian subarctic following European contact. He challenges, with a rich variety of historical documents, the frequently articulated view that there is a general cultural continuity from the pre-contact period to the twentieth century. Leaving to the domain of the archaeologists the pre-historic period when all the people of the vast area from approximately 52N to the edge of the tundra and from Hudson Bay to Alaska were hunters, fishers, and gatherers subsisting entirely on native resources, Yerbury focuses on the Protohistoric and Historic Periods. The ecological and sociocultural adaptations of the Athapaskans are explored through the two centuries when they moved from indirect contact to dependency on the Hudson Bay trading posts. For nearly one hundred years prior to 1769 when North West Company traders began to establish trading relationships in the heart of Athapaskan territory, contacts with Europeans were almost entirely indirect, conducted through Chipewyan middlemen who jealously guarded their privileged access to the posts. The boundaries of the indirect trade areas fluctuated owing to intertribal rivalries, but generally, the hardships of travel over great distances prevented the Athapaskans from establishing direct contact with the posts. The pattern was only broken by the gradual expansion of the traders themselves into new regions. But, as Yerbury shows, it is a mistake to believe significant sociocultural change only began when posts were established. In fact, technological changes and economic adjustments to facilitate trade had already transformed Athapaskan groups and integrated them into the European commercial system by the opening of the Historic Era. The Early Fur Trade Period (1770-1800) was characterized by local trade centered on a few posts where Indians were simultaneously posthunters, trappers, and traders as well as middlemen. But the following Competitive Trade Period before the amalgamation of the fur companies in 1821 saw ruinous and violent feuding which had devastating effects on traders and natives alike. During these years there were great qualitative changes in the native way of life and the debt system was introduced. Finally, in the Trading Post Dependency Period, monopoly control brought peace and stability to the native population through the formation of trading post bands and trapping parties in the Athapaskan and Mackenzie Districts. This regularization of the trade and proliferation of new commodities represented a further basic transformation in native productive relations, making trade a necessity rather than a supplement to furnishing native livelihoods. By detailing this series of changes, *The Subarctic Indians and the Fur Trade, 1680-1860* furthers understanding of how the Hudson's Bay Company and then government officials came to play an increasing role that the Dene themselves now wish to modify drastically.
