The social history of the Port Phillip District between 1839 and 1854 is explored by following in detail the lives of two early pioneers. These two men took up occupancy of the large Campaspe Plains Station in central Victoria. One was a rich, but eccentric land agent, Daniel Jennings; the other, a surgeon from Gloucestershire, Dr George Playne. Jennings remained a squatter and land investor until 1851, when he returned to England. Playne moved to Melbourne to practise medicine in 1844. He played important roles in efforts to improve tenure for squatters, to form a new colony separate from NSW, to establish a medical association and a hospital. He was a magistrate from 1843 until 1854. He returned to England in 1854. Their lives in England and Australia from birth to death and that of their families have been explored in depth. 444 pages, 85 illustrations with 10 in colour, fully indexed, paperback, A5

### The Japanese Enterprise System Nova Science Pub Incorporated

This volume merges four streams of inquiry and interpretation in a study of the evolution and emergence of Japan's leading industrial firms during the twentieth century. First, it is a historical study of how the industrial institutions of modern Japan appeared and matured. Second, it is an organization study of the basic forms of social and economic interaction in Japan. Third, it is a development study of how circumstances of rapid technical and economic change have shaped the Japanese business system. It is also a strategy study of how Japanese managers have responded to and shaped these circumstances. This fourfold synthesis offers a model of institutional development under conditions of late economic development and private initiative that falls somewhere between a capitalist development state and a free market economy. Business policy rather than industrial policy is accentuated, revealing a set of robust institutions and a dynamic to activate and interrelate them.

Engineering Communication Manual will serve the engineering communication and engineering design courses required for the undergraduate engineering student.

Intended for the first-year engineering major as well as the student about to begin a professional career, the text addresses the writing issues and communication approaches specific to the discipline, like collaborative writing, field reporting, and poster presentations. Above all, the text asks students to synthesize elements of technical argument and to think critically about how they present content.

Engineering Communication Manual's distinctive module-based format allows instructors to assign stand-alone readings and activities for the students, depending on their familiarity and experience with engineering communication and design projects. The direct format also complements the engineering student accustomed to "plug and chug" solutions. Accessible, dynamic, and full of relevant examples, Engineering Communication Manual focuses on the student as well as reflects the worldview of the engineering professions. The text will be accompanied by instructor resources like assignments, prompts, and rubrics for specific learning objects; annotated samples of student work in several genres and media; and suggestions for using the book in different courses, like first-year design m lab courses, third-year technical communication or capstone design.
