This new  
series  
provides an  
ideal platform  
to study chess  
openings. By  
continually  
challenging  
the reader to  
answer probing  
questions  
throughout the  
book, the Move  
by Move format  
greatly  
encourages the  
learning and  
practising of  
vital skills  
just as much

as the  
traditional  
assimilation of  
opening  
knowledge.  
Carefully  
selected  
questions and  
answers are  
designed to  
keep you  
actively  
involved and  
allow you to  
monitor your  
progress as you  
learn. This is  
an excellent  
way to study  
any chess  
opening and at  
the same time  
improve your  
general chess  
skills and  
knowledge. The  
English Opening  
is a popular  
choice, from  
club level all  
the way through  
to world  
champions. Its

flexibility  
allows players  
to choose from  
a number of  
different set-  
ups -  
positional or  
aggressive,  
classical or  
hypermodern. It  
also appeals to  
those who  
prefer learning  
opening ideas  
to memorizing  
reams of  
theory. In this  
book, Steve  
Giddins invites  
you to join him  
in studying the  
English and its  
many  
variations. He  
examines  
instructive  
games, covers  
the most  
important lines  
and provides  
answers to all  
the key  
questions.

 In this book Ian Sinclair provides the practical knowhow required by technician engineers, systems designers and students. The focus is

firmly on understanding the technologies and their different applications, not a mathematical approach. The result is a highly readable text which provides a unique introduction to the selection and application of sensors, transducers and switches, and a grounding in the practicalities of designing with these

devices. The devices covered encompass heat, light and motion, environmental sensing, sensing in industrial control, and signal-carrying and non-signal switches. Get up to speed in this key topic through this leading practical guide
