Building on the progress report published in November 2014, Enabling the Business of Agriculture 2016: Comparing regulatory good practices provides a tool for policymakers to identify and analyze legal barriers for the business of agriculture and to quantify transaction costs of dealing with government regulations. The report presents the main results for 40 countries, for the first time using indicator scores to showcase good practices among countries in different stages of agricultural development. It also presents interesting results on the relationship between efficiency and quality of regulations, discriminatory practices in the laws and whether regulatory information is accessible. Regional, income-group and country-specific trends and data observations are presented on six topics: seed, fertilizer, machinery, finance, markets and transport. The report also discusses the continued development of several topics which will be added in future reports: information and communication technology, land, water, livestock, gender and environmental sustainability. Data are current as of 31 March, 2015.

This open access book explores supply chains strategies to help companies face challenges such as societal emergency, digitalization, climate changes and scarcity of resources. The book identifies industrial scenarios for the next decade based on the analysis of trends at social, economic, environmental technological and political level, and examines how they may impact on supply chain processes and how to design next generation supply chains to answer these challenges. By mapping enabling technologies for supply chain innovation, the book proposes a roadmap for the full implementation of the supply chain strategies based on the integration of production and logistics processes. Case studies from process industry, discrete manufacturing, distribution and logistics, as well as ICT providers are provided, and policy recommendations are put forward to support companies in this transformative process.

Reinvent your supply chain from the outside in – cut costs, growth revenue and increase customer satisfaction. We are now seeing and experiencing increasing turbulence in practically all our major industries, which is leading to costly mis-alignments between suppliers and their customers/end users. The world is no longer as forgiving as it was a few decades ago. Customers going online have become increasingly demanding, and the operating environment has become exceedingly complex. This combination means that companies wishing to survive and thrive in the coming decades must transform themselves to become more agile and market responsive. The problem is: where to start this transformation journey? We all pay lip service to being customer-centric, but the reality is that most of the world's large corporations have built up their logistics networks (and by extension their enterprise supply chains) over many years of sunk investment, pursuing the flawed philosophy of 'one-size-fits-all'. The solution to this dilemma is the Dynamic Alignment™ framework, which directly links the target market, to the operational strategies, internal cultural capability, and leadership styles inside our enterprise. It will help you to adopt an 'outside-in' perspective of our market by seeing the world through the lens of our customers; and use the insights gained in this way to reverse engineer the capabilities inside our enterprises to more precisely align with customers' expectations. Transforming Supply Chains allows you to segment your customer's expectations into not one, but several dominant buying behaviours. By identifying how your market is structured, you can develop matching value propositions and corresponding operational strategies for each behavioural segment identified and then use those findings to redefine the internal operating structure as well as the external supply chains. Companies already using this model have seen greater customer satisfaction, an uplift in revenue, and a reduction in costs. In some cases, companies have doubled their margins within a year.
