The must-read summary of David Kord Murray's book: "Borrowing Brilliance: The Six Steps to Business Innovation by Building on the Ideas of Others". This complete summary of the ideas from David Kord Murray's book "Borrowing Brilliance" shows that that new ideas are always constructed out of existing ideas. What appears to be genuinely original ideas always combine snippets of one idea with parts of another to come up with something which has never before been combined in that way. To be specific, when you look at the creative process from a big picture perspective, you'll always find the genesis of any new idea comes through a six-step process. By working through this six-step process, you come up with something new

which combines aspects or elements of old and established ideas into a different mix. Added-value of this summary: • Save time • Understand the key concepts • Increase your business knowledge To learn more, read "Borrowing Brilliance" and discover where to borrow the materials from and how to put them together and determine your creative ability.

Mathematics for Economics

Without the close, there is no sale. Pretty obvious, right? Yet, for many salespeople, closing is the most baffling and elusive part of the selling process. All too often, salespeople meet qualified clients and charm them with an eloquent presentation, only to see the sale mysteriously slip from between their fingers

in the end. Which is sad when you consider all the hard work – the prospecting, preparation, planning, and practice – done for the sake of a moment of truth that never arrives.
Fortunately, closing is an art that can be mastered, and now *Sales Closing For Dummies* shows you how. Packed with powerful principles that can help you become a top-producing salesperson, *Sales Closing For Dummies* is the ultimate guide to mastering that most mysterious part of the selling equation. Tom Hopkins, the legendary sales genius who, by age 30 was the nation's leading real-estate trainer, demystifies closing and shows what it takes to be a champion closer, including how to: Lead a sale without being pushy
Read the signs of an interested potential buyer
Use questioning methods that close sales, time and again
Help clients feel good about their buying decisions
Keep your clients' business and build their loyalty
Build long-term relationships and watch your sales grow
With the help of dozens of real-life examples from a wide cross section of industries, Tom shows why professional selling is about communication, not coercion. And he shares his considerable insight and experience on: Verbal and visual buying cues and how to recognize them
Choosing the best location for closing
Addressing concerns and creating a sense of urgency
Time-tested tactics and strategies for ending customer

procrastination, overcoming their fear, closing from a distance, and more The ten biggest closing mistakes and how to avoid them Add-on selling and other ways of getting your clients to help you to build your business Featuring Tom's Hopkins' trademark "Red Flag" key points and situation scripts, this fun, easy-to-understand guide arms you with the hands-on tools and techniques you'll need to become a world-class closer.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary

science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
