Earthen dams may fail, like other
engineering structures, due to improper
designs, faulty constructions, lack of
maintenance, etc. The various causes
leading to the failure of earth dams can
be grouped as: (1) Hydraulic failures,

(2) Seepage failures, and (3) Structural
failures.

Hydraulic structures include: When we talk about hydraulic structures we tend to mean large structural devices that get used for either water supply or for managing water flows. Examples of hydraulic structures include dams, Which we use to store water for all sorts of uses Or for storing energy for hydro power We can also look at sluice gates,
