Psychosocial Rehabilitation is a comprehensive ready-reference for mental health practitioners and students, providing practical advice on the full range of interventions for psychosocial rehabilitation. It contextualises the interventions described and provides pointers to enable the reader to explore the theory and research. This manual recognises the wide-ranging impact of mental illness and its ramifications on daily life, and promotes a recovery model of psychosocial rehabilitation and aims to empower clinicians to engage their clients in tailored rehabilitation plans. The book is divided into five key sections. Section 1 looks at assessment covering tools available in the public domain, instruments, scoring systems, norms and applications for diagnosis and measurement of symptoms, cognitive functioning, impairment and recovery. Section 2 covers the full range of therapeutic interventions and offers advice on training and supervision requirements and evaluation of process, impact and outcome. Section 3 provides manuals and programs for intervention effectively provided as group activities. Section 4 explains how to design a full programme that integrates therapeutic interventions with group programmes as well as services provided by other agencies. The final section looks at peer support and self

help, providing manuals and resources that support programmes and interventions not requiring professional or practitioner direction.

Planning is an important management function and its effective execution is crucial to ensure the success of any project. This second edition of Thomas Uher 's and Adam Zantis' textbook maintains its focus on operational rather than strategic aspects of programming and scheduling of projects, providing the reader with the practical planning skills needed to be successful. Unlike most other textbooks that largely focus on the critical path method, Programming and Scheduling Techniques includes a comprehensive review of a range of practices used around the world. Topics covered in this thoroughly revised edition include: deterministic scheduling techniques including the bar chart, the critical path method, the critical chain method, the multiple activity chart and the line of balance a comparison of the critical path and critical chain scheduling techniques options for computer-based scheduling stochastic scheduling techniques including the critical path method based on Monte Carlo simulation and the Program Evaluation and Review Technique (PERT) risk in scheduling work

study. By covering a broad range of scheduling techniques this book is suitable for those planning projects in any industry, particularly in interdisciplinary or international contexts. Learning activities, step-by-step guides, and a downloadable answers booklet make sure no reader is left behind. Written for students studying undergraduate and postgraduate architecture, building, construction/project management, quantity surveying, property development and civil engineering programs.

Visual Basic is one of the easiest to learn computer programming language. Yes, it is obsolete but all MS Office products include VBA (Visual Basic for Application) and if you learn VB you will know VBA! In my tutorial, I used VB 6 to explain step by step how to create a simple Visual Basic Application and a relatively complex one (a Patient Management system) that is using a database. A patient Management application source code is explained in details. You will learn how to design and create a database in MS Access and how to create tables and queries. The book includes a sample application that shows how to use Windows API function. You will learn how to convert VB program that can be run only in Visual Basic development environment to a distributable application that can be installed on any client computer. For illustration, I included more than 100 screenshot images and links to a video. You will be able to download from my website complete source code for 7 Visual Basic projects including a Password Keeper, a Patient Management and a Billing Management application. The title is an effective, manualized parent education programme' - Educational Book Review This ground-breaking training programme has been developed in response to a real need for evidence-based early interventions for very young autistic children. Authoritative and extensively tried and tested, it will help both parents and carers to understand the disorder and how it affects child development. Ultimately, the programme is designed to reduce the severity of emotional/behavioural difficulties by managing a child's particular problems and encouraging effective collaboration between professionals and parents. The programme is delivered through two accessible manuals - one for parents and one for clinicians - which provide all the information and materials you need. The Manual for Clinicians explains the purpose and content of each session and includes notes for discussion and teaching, a checklist of 'things to do', and photocopiable task sheets for distribution and discussion. The Manual for Parents features tasks, exercises and discussion points for group sessions, and complements these training materials with engaging personal accounts, an introduction to the history of autism, information about approaches to treatment, and a list of useful websites and further reading. Structured as a series of individual and small group sessions, the programme is designed to run for 20 weeks and covers key areas such as understanding and managing difficult behaviour; changing/encouraging new behaviours; communication problems in verbal and non-verbal children; social problems; and how to work and play together. Together, these manuals will provide you with all the information, support and resources you need to run this programme successfully.
