An analogy is a comparison that points out the similarities between things that are different in all other respects. Teaching students how to solve analogies not only develops their logical thinking, but also builds visual awareness and verbal proficiency. The seven different types of visual analogies and 14 different verbal analogies in *Analogies for Beginners* are perfect for beginning lessons in logical reasoning, flexible thinking, and vocabulary. Each page gives students an example of the type of analogy that is being introduced and then provides 7 (visual) or 10 (verbal) problems for them to solve. This combination of verbal and visual formats is an ideal way to introduce logical thinking in primary grades. Whether you have time for one analogy a day, or a worksheet a week, students will benefit in many ways when analogies are part of your curriculum. The use of visual analogies is beneficial for developing visual analysis even for older students, but especially useful for nonreaders and students with developing English skills. Are you looking for a motivating way to combine problem solving, visual discrimination, and language? *Word Bogglers* is just what you need. A word boggler is a puzzle, a brain teaser, and a lesson in language, all rolled into one. These clever visual puzzles use words and phrases to build flexible thinking and word literacy. Each word boggler is a word or phrase that has been written so that its meaning is conveyed via the position, number, or size of the

words and letters. Some of the puzzles are words while some are familiar idioms and clichés. Thus, this book brings an opportunity to develop vocabulary and knowledge of often-used phrases in the form of motivating brainteasers. Each page features six of these visual puzzles. Students analyze the way the words are written (size, position, and direction) to solve each boggler and match it with its definition. A way to further reinforce the understanding of each phrase is to have students use the phrases in a written sentence. You can use these puzzles in a variety of ways, including: putting them on the overhead for a quick daily thinking challenge, using them as starting points for daily writing exercises, using an entire page for a weekly challenge, forming groups to work together on solving the puzzles, using them in a learning center, and having students make up their own puzzles. Bring Words Bogglers into your classroom today. The result of using these word puzzles is lots of fun, lots of challenge, and increased knowledge of the meaning of common idioms and words. For more word puzzles, see *The World's Greatest Brain Bogglers* and *Brain Twisters!* **Logic Safari** Puzzles designed to strengthen students' logical deductive thinking skills. **Primarily Logic**

As insightful and wise today as it was when originally published in 1954, Jacques Ellul's *The Technological Society* has become a classic in its field, laying the groundwork for all other studies of technology and society that have followed. Ellul offers a penetrating analysis of our technological civilization, showing how technology—which began innocuously enough as a servant of humankind—threatens to overthrow humanity itself in its ongoing creation of an environment that meets its own ends. No conversation about the dangers of technology and its unavoidable effects on society can begin without a careful reading of this book. "A magnificent book . . . He goes through one human activity after another and shows how it has been technicized, rendered efficient, and diminished in the process." —Harper's "One of the most important books of the second half of the twentieth-century. In it, Jacques Ellul convincingly demonstrates that technology, which we continue to conceptualize as the servant of man, will overthrow everything that prevents the internal logic of its development, including humanity itself—unless we take necessary steps to move human society out of the environment that 'technique' is creating to meet its own needs." —The Nation "A description of the way in which technology has become completely autonomous and is in the process of taking over the traditional values of every society without exception, subverting and suppressing these values to produce at last a monolithic world culture in which all non-technological difference and variety are mere appearance." —Los Angeles Free Press
