"Daemon in the
Sanctuary" explores the
uncanny contradiction
between the
phenomenological
experience of home as
a site of nurture and
security and the
empirical reality that
people are far more
likely to be hurt and
even killed in their
own homes by their
intimates, rather than
at the hands of
strangers. Moving from

the syrupy tributes of
the god of love in
Plato's "Symposium" to
the subject of
domestic violence
appears to be a giant
leap, but the author
shows that embroidered
romantic ideas about
love prepare the
initiate poorly for
the reality of
intimate connection.
Poets and philosophers
who lead us to believe
that love is heaven
sent can leave us
craving an extreme
experience. We crave
an earth-shaking, life-
altering intrusion on
our tranquility as
evidence that love is
real. Thus the naive
initiate can easily
mistake the flutter of
the pulse, the
quickenings of the
heart rate, the flush,
the confused emotions,
and the painful
longing as signs of
the god's gift. But

these are also the signs of fear! Wendy C. Hamblet, a philosopher in the phenomenological lineage, examines the truth value of phenomenological experience, through the lens of the problem of intimate violence. If Husserl is right and phenomenological method provides the ground of all empirical truth, then what is to be made of the fundamental contradiction between the lived experience of home as a site of nurture and security and of intimates as guardians and caretakers, and the empirical fact, evident in every human society, that people are far more likely to be harmed, and even killed, in their homes or in the homes of

their intimates and at the hands of those charged with their care? Hamblet carefully choreographs a dance between the two opposing 'truths' to expose how the lived sense of home, colored by ideals, can tint people's expectations about intimate connection and cloud their ability to recognize the signs of intimate abuse. This book illuminates the dangers and pitfalls of unhealthy intimacy and offers a regimen for loosening the grip of a sickened love's pathological hold.

Since the first edition was published in 1983, this highly-regarded introductory textbook has been used by

many generations of students worldwide. It is specifically tailored to the requirements of first or second year geology undergraduates. The third edition has been extensively revised and updated to include many new sections and over 50 new or redrawn illustrations. There are now over 220 illustrations, many incorporating a second colour to highlight essential features. The format has been changed to enhance the visual attractiveness of the book. The tripartite organization of the first and second editions has been modified by combining the purely descriptive or factual aspects of fault and fold structure in the earlier chapters with a simple treatment of mechanisms, leaving the more geometrically complex treatment until after the relevant sections on stress and strain, as before. Some subjects are introduced for the first time, e.g. inversion and orogen collapse, and others have been extensively modified, e.g. the chapter on gravity controlled structures now emphasises modern work on salt tectonics. The last third of the book is devoted to the wider context of geological structures and how they relate to plate tectonics. The final two chapters have been considerably expanded and give examples of various types of geological structures in their plate tectonic settings in both modern and ancient orogenic belts.

It was five degrees below zero, and Roger Morneau was out of gas. If his toes froze, they would have to be amputated. The man bowed his head in prayer. "It was almost as if something hit the back of my automobile and it shot forward," he says. "Then the motor started to accelerate and hummed like never before." He drove the 27 miles to safety without a drop of gas!

Exercises in Health Claims Examining, The Practice of Health Claims Examining,

2e, contains a simulated work program to help you experience the real life situations that a claims examiner experiences on a daily basis. This book is created for use in conjunction with ICDC Publishing's Guide to Health Claims Examining. Some of the exercises in the simulated work portion of the book are based upon concepts learned in the Guide to Health Claims Examining (i.e., procedures for processing claims, interpretation of contracts,

understanding UCR and deductibles, etc.). This book alone should not be considered a complete text for learning health claims examining. It is suggested that a trainee take a complete health claims examining course prior to using this book. The simulated work portion of this text incorporates concepts which are not taught by simple data entry, for example UCR calculations, privacy guidelines, client record keeping, correspondence, and manual completion of claims processing. This text is designed to allow the student to work through the material at their own pace. Foundations of Structural Geology Greenwood Publishing Group

The United States Civil War touched the lives of every American North and South at that time. This informative book makes extensive use of journals, newspapers, and diaries to bring together the experience of the soldier, civilian, and slave in one volume.

What the soldiers ate, how they lived, and what they did for entertainment are discussed in detail.

The experiences of Billy Yank and Johnny Reb are contrasted with activities on the homefront to bring this turbulent era alive for students, teachers, and Civil War buffs.
