Math Connects, Course 1 Student Edition Penguin

"Daemon in the Sanctuary" explores the uncanny contradiction between the phenomenological experience of home as a site of nurture and security and the empirical reality that people are far more likely to be hurt and even killed in their own homes by their intimates, rather than at the hands of strangers. Moving from the syrupy tributes of the god of love in Plato's "Symposium" to the subject of domestic violence appears to be a giant leap, but the author shows that embroidered romantic ideas about love prepare the initiate poorly for the reality of intimate connection. Poets and philosophers who lead us to believe that love is heaven sent can leave us craving an extreme experience. We crave an earth-shaking, life-altering intrusion on our tranquility as evidence that love is real. Thus the naive initiate can easily mistake the

flutter of the pulse, the quickening of the heart rate, the flush, the confused emotions, and the painful longing as signs of the god's gift. But these are also the signs of fear! Wendy C. Hamblet, a philosopher in the phenomenological lineage, examines the truth value of phenomenological experience, through the lens of the problem of intimate violence. If Husserl is right and phenomenological method provides the ground of all empirical truth, then what is to be made of the fundamental contradiction between the lived experience of home as a site of nurture and security and of intimates as guardians and caretakers, and the empirical fact, evident in every human society, that people are far more likely to be harmed, and even killed, in their homes or in the homes of their intimates and at the hands of those charged with their care? Hamblet carefully choreographs a dance between the two opposing 'truths' to expose how the lived sense of home, colored by ideals, can tint people's expectations about intimate connection and cloud their ability to recognize the signs of intimate abuse. This book illuminates the dangers and pitfalls of unhealthy intimacy and offers a regimen for loosening the grip of a sickened love's pathological hold.

"Lively, thought-provoking . . . the plot is ingenious, packing a wallop of a surprise . . . Tepper knows how to write a well-made, on-moving story with strong characters. . . . She takes the mental risks that are the lifeblood of science fiction and all imaginative narrative."—Ursula K. LeGuin, *Los Angeles Times* Since the flames died three hundred years ago, human civilization has evolved into a dual society: Women's Country, where walled towns enclose what's left of past civilization, nurtured by women and a few nonviolent men; and the adjacent garrisons where warrior men live—the lost brothers, sons, and lovers of those in Women's Country. Two societies. Two competing dreams. Two ways of life, kept apart by walls stronger than stone. And yet there is a gate between them. . . . "Tepper not only keeps us reading . . . she provokes a new look at the old issues."—*The Washington Post* "Tepper's cast of both ordinary and extraordinary people play out a powerful drama whose significance goes beyond sex to deal with the toughest problem of all, the challenge of surmounting humanity's most dangerous flaws so we can survive—despite ourselves."—*Locus*

Glencoe Mathematics for Business and Personal Finance, Student Edition Greenwood Publishing Group

Since the first edition was published in 1983, this highly-regarded introductory textbook has been used by many generations of students worldwide. It is specifically tailored to the requirements of first or second year geology undergraduates. The third edition has been extensively revised and updated to include many new sections and over 50 new or redrawn illustrations. There are now over 220 illustrations, many incorporating a second colour to highlight essential features. The format has been changed to enhance the visual attractiveness of the book. The tripartite organization of the first and second editions has been modified by combining the purely descriptive or factual aspects of fault and fold structure in the earlier chapters with a simple treatment of mechanisms, leaving the more geometrically complex treatment until after the relevant sections on stress and strain, as before. Some subjects are introduced for the first time, e.g. inversion and orogen collapse, and others have been extensively modified, e.g. the chapter on gravity controlled structures now emphasises modern work on salt tectonics. The last third of the book is devoted to the wider context of geological structures and how they relate to plate tectonics. The final two chapters have been considerably expanded and give examples of various types of geological structures in their plate tectonic settings in both modern and ancient orogenic belts.
