Political Consultants and Campaigns: One Day to Sell examines the differences between how political science theory suggests campaigns should be run and how political consultants actually run campaigns. In the wake of consultants who effortlessly move from campaigners to policymakers, the dearth of knowledge about the attitudes, beliefs, and strategies of the consultants themselves is still a glaring absence in the analysis of American politics. How can we purport to know what is happening in American political campaigns if we don't know what is on the minds of the men and women who run them? This book provides a clearer understanding of modern-day political campaigns by revealing what is on the minds of the people who run them. With original data from consultants, campaign managers, and professional campaign

schools, author Jason Johnson examines consultant behavior on message formation, policy positioning, candidate recruitment, Internet strategy, and negative advertising and compares these practices to existing political science theory. This groundbreaking research makes *Political Consultants and Campaigns: One Day to Sell* a must-have resource for all students of American politics, campaign managers, or anyone interested in how political campaigns in America are run.

During December 2012, Jorge Paulo Lemann, a co-founder and partner at 3G, proposed to Warren Buffett that 3G and Berkshire Hathaway acquire H.J. Heinz Company. Lemann and Buffett, who had known each other for years, jointly decided that the Heinz turnaround had been successful and that there was significant potential for continued global growth. 3G informed Heinz CEO William Johnson that it and Berkshire Hathaway were interested in jointly acquiring his company. Johnson then presented the investors' offer of \$70.00 per share of outstanding common stock to the Heinz board. After much discussion, the Heinz board and its advisors informed 3G that without better financial terms they would not continue to discuss the possibility of an acquisition. Two days later, 3G and Berkshire Hathaway returned with a revised proposal of \$72.50 per share, for a total transaction value of \$28 billion (including Heinz's outstanding debt). Following a forty-day "go-shop" period, Heinz, 3G, and Berkshire Hathaway agreed to sign the deal. But was this, in fact, a fair deal? And what might be the future consequences for shareholders, management, employees, and citizens of Pittsburgh, the location of the company's headquarters? Last, what was the role of activist investors in bringing Heinz to this deal stage? After reading and analyzing the case, students will be able to: -Understand the influence of investment bankers on M & A transactions -Consider synergies that drive M & A -Consider the role of activist investors in corporate strategic decision-making -Understand the impact of M & A on key corporate stakeholders -Apply core valuation techniques to support M & A valuation.

According to Johann Wolfgang Von Goethe's (1740-1832) *Mineralogy and Geology*, "The history of science is science." A

sesquicentennial later, one may state that the history of high performance polymers is the science of these important engineering polymers. Many of the inventors of these superior materials of construction have stood on the thresholds of the new and have recounted their experiences (trials, tribulations and satisfactions) in the symposium and in their chapters in this book.

Those who have not accepted the historical approach in the past, should now recognize the value of the historical viewpoint for studying new developments, such as general purpose polymers and, to a greater degree, the high performance polymers. To put polymer science into its proper perspective, its worth recalling that historically, the ages of civilization have been named according to the materials that dominated that period. First there was the Stone Age eventually followed by the Tin, Bronze, Iron and Steel Ages. Today many historians consider us living in the Age of Synthetics: Polymers, Fibers, Plastics, Elastomers, Films, Coatings, Adhesives, etc. It is also interesting to note that in the early 1980's, Lord Todd, then President of the Royal Society of Chemistry was asked what has been chemistry's biggest contribution to society. He felt that despite all the marvelous medical advances, chemistry's biggest contribution was the development of polymerization. Man's knowledge of polymer science is so new that Professor Herman F.

Electrical Power Cable Engineering, Second Edition remains the foremost reference on low- and medium-voltage electrical power cables, cataloging technical characteristics and assuring success for cable manufacture, installation, operation, and maintenance. While segments on electrical cable insulation and field assessment have been revamped to reflect industry transformations, new chapters tackle distinctive topics like the location of underground system faults and the thermal resistivity of concrete, proving that this expanded edition lays a sound foundation for engineering decisions. It deconstructs the external variables affecting conductor, insulation, and shielding design.

Accountants' Liability Routledge "In 1939," Julian Padowicz says, "I was a Polish Jew-hater. Under different circumstances my story might have been one of denouncing Jews to the Gestapo. As it happened, I was a Jew myself, and I was seven years old." Julian's mother was a Warsaw socialite who had no interest in child-rearing. She turned her son over completely to his governess, a good Catholic, named Kiki, whom he loved with all his heart. Kiki was deeply worried about Julian's immortal soul, explaining that he could go to Heaven only if he became a Catholic. When bombs began to fall on Warsaw, Julian's world crumbled. His beloved Kiki returned to her family in Lodz; Julian's stepfather joined the Polish army, and the grief-stricken boy was left with the mother whom he hardly knew. Resourceful and determined, his mother did whatever was necessary to provide for herself and her son: she brazenly cut into food lines and befriended Russian officers to get extra rations of food and fuel. But

brought up by Kiki to distrust all things Jewish, Julian considered his mother's behavior un-Christian. In the winter of 1940, as conditions worsened, Julian and his mother made a dramatic escape to Hungary on foot through the Carpathian mountains and Julian came to believe that even Jews could go to Heaven.

A software architect's digest of core practices, pragmatically applied Designing effective architecture is your best strategy for managing project complexity – and improving your results. But the principles and practices of software architecting – what the authors call the “science of hard decisions” – have been evolving for cloud, mobile, and other shifts. Now fully revised and updated, this book shares the knowledge and real-world perspectives that enable you to design for success – and deliver more successful solutions. In this fully updated Second Edition, you will: Learn how only a deep understanding of domain can lead to appropriate architecture Examine domain-driven design in both theory and implementation Shift your approach to code first, model later – including multilayer architecture Capture the

benefits of prioritizing software maintainability See how readability, testability, and extensibility lead to code quality Take a user experience (UX) first approach, rather than designing for data Review patterns for organizing business logic Use event sourcing and CQRS together to model complex business domains more effectively Delve inside the persistence layer, including patterns and implementation.

Science, technology, engineering, and mathematics (STEM) are cultural achievements that reflect our humanity, power our economy, and constitute fundamental aspects of our lives as citizens, consumers, parents, and members of the workforce. Providing all students with access to quality education in the STEM disciplines is important to our nation's competitiveness. However, it is challenging to identify the most successful schools and approaches in the STEM disciplines because success is defined in many ways and can occur in many different types of schools and settings. In addition, it is difficult to determine whether the success of a school's students is caused by actions the school takes or simply related to the population of students in the school.

Successful K-12 STEM Education defines a framework for understanding "success" in K-12 STEM education. The book focuses its analysis on the science and mathematics parts of STEM and outlines criteria for identifying effective STEM schools and programs. Because a school's success should be defined by and measured relative to its goals, the book identifies three important goals that share certain elements, including learning STEM content and practices, developing positive dispositions toward STEM, and preparing students to be lifelong learners. A successful STEM program would increase the number of students who ultimately pursue advanced degrees and careers in STEM fields, enhance the STEM-capable workforce, and boost STEM literacy for all students. It is also critical to broaden the participation of women and

minorities in STEM fields. Successful K-12 STEM Education examines the vast landscape of K-12 STEM education by considering different school models, highlighting research on effective STEM education practices, and identifying some conditions that promote and limit school- and student-level success in STEM. The book also looks at where further work is needed to develop appropriate data sources. The book will serve as a guide to policy makers; decision makers at the school and district levels; local, state, and federal government agencies; curriculum developers; educators; and parent and education advocacy groups.

This book explores challenges and approaches to the development, financial management and growth of Eastern European organizations, both public and private. Including papers derived from the 2015 Griffiths School of Management Annual Conference on Business, Entrepreneurship and Ethics (GSMAC), organized by Emanuel University of Oradea, the authors provide a variety of strategies for growth and development in areas such as IT, medical management, marketing, entrepreneurship and family business. Collectively, these contributions provide a problem-solving framework that tackles such questions

as: How are the growth and financial models of organizations changing? How should leadership in organizations adapt in order to ensure sustainable growth? How should educational concepts and methods be improved to help the next generation in the new global business environment? The rapid evolution of technology and innovation has changed the face of the business environment. With new actors in the global marketplace and new means of production, marketing and finance, businesses—particularly those in emerging regions, such as Eastern Europe—are faced with the pressure to rethink their structures and models from within. In this new economic climate, common issues such as corruption, risk, and customer satisfaction need to be examined from a globalized perspective. The goal of the 2015 GSMAC conference and the resulting papers is to help organizations and institutions in Eastern Europe and other developing regions formulate strategies and policies to thrive in this environment and promote sustainable management practices.
