Darwin's theory of evolution by natural selection is a species adaptation to its environment and the environment's impact to the species over time.

evolution | Theory, Examples, & Facts | Britannica

Darwin's Theory of Evolution is the widely held notion that all life is related and has descended from a common ancestor: the birds and the bananas, the fishes and the flowers -- all related. Darwin's general theory presumes the development of life from non-life and stresses a purely naturalistic (undirected) "descent with modification".

[Evolution - Wikipedia](#)

Darwinism is a theory of biological evolution developed by the English naturalist Charles Darwin (1809 – 1882) and others, stating that all species of organisms arise and develop through the natural selection of small, inherited variations that increase the individual's ability to compete, survive, and reproduce.

What is evolution? - BBC Bitesize

Darwin's Theory of Evolution – Biology for Kids | Mocomi

Darwin published his theory of evolution with compelling evidence in his 1859 book *On the Origin of Species*. By the 1870s, the scientific community and a majority of the educated public had accepted evolution as a fact.

(PDF) Darwin's Theory Of Evolution - ResearchGate

From Wikipedia, the free encyclopedia Darwin, as photographed in 1860, was still clean shaven at this time. The publication of Darwin's theory brought into the open Charles Darwin's theory of evolution through natural selection, the culmination of more than twenty years of work.

Darwinism - Wikipedia

Darwin and a scientific contemporary of his, Alfred Russel Wallace, proposed that evolution occurs because of a phenomenon called natural selection. In the theory of natural selection, organisms produce more offspring that are able to survive in their environment.

Darwin's theory of evolution is the mechanism by which the natural world produces the variety of life. The theory of evolution is one of the most widely accepted ways to explain all life on earth. At its center is how biology directs the evolution of species to create diversity and change in the natural world.
