Data Analysis for Decision Making | edX

Data analysis is important in business to understand problems facing an organisation, and to explore data in meaningful ways. Data in itself is merely facts and figures. Data analysis organises, interprets, structures and presents the data into useful information that provides context for the data.

Data Analysis for Business Decisions

Data analysis is an internal arrangement function done by data analysts through presenting numbers and figures to management. It involves a more detailed approach in recording, analyzing, disseminating,

and presenting data findings in a way that is easy to interpret and make decisions for the business.

Data Analysis For Business Decisions

People analytics is a data-driven approach to managing people at work. For the first time in history, business leaders can make decisions about their people based on deep analysis of data rather than the traditional methods of personal relationships, decision making based on experience, and risk avoidance.

What is Data Analysis?

Research | Types | Methods | Techniques
