# Data Warehousing And Mining Previous Question Papers

Eventually, you will completely discover a further experience and triumph by spending more cash. yet when? accomplish you recognize that you require to acquire those every needs subsequent to having significantly cash? Why dont you try to get something basic in the beginning? Thats something that will lead you to understand even more something like the globe, experience, some places, following history, amusement, and a lot more?

It is your totally own time to do its stuff reviewing habit. among guides you could enjoy now is Data Warehousing And Mining Previous Question Papers below.

## Data Warehousing And Mining Previous Question Papers

Data warehouse refers to the process of compiling and organizing data into one common database, whereas data mining refers to the process of extracting useful data from the databases. The data mining process depends on the data compiled in the data warehousing phase to recognize meaningful patterns. A data warehousing is

created to support management systems.

More About Data Ware House and Data Mining : A data warehouse is a collection of databases that work together. A data warehouse makes it possible to integrate data from multiple databases, which can give new insights into the data. The ultimate goal of a database is not just to store data, but to help businesses make decisions

based on that data.

Previous Question Papers Jntuh  
The data in a data warehouse  
provides information from the  
historical point of view. Non-  
volatile ? Non-volatile means the  
previous data is not erased when  
new data is added to it. A data  
warehouse is kept separate from  
the operational database and  
therefore frequent changes in  
operational database is not  
reflected in the data warehouse.

### **200+ [UPDATED] Data Warehousing MCQs**

Data mining refers to extracting knowledge from large amounts of data. The data sources can include databases, data warehouse,

web etc. Knowledge discovery is an iterative sequence:  
Data cleaning - Remove inconsistent data.  
Data integration - Combining multiple data sources into one.  
Data selection - Select only relevant data to be analysed.
