The Complete Idiot's Guide to Public Speaking: 2nd Edition Frontiers Media SA

Writings by thinkers ranging from Rokeya Sakhawat Hossain to Bruno Latour that focus on the interconnections of technology, society, and values. Technological change does not happen in a vacuum; decisions about which technologies to develop, fund, market, and

use engage ideas about values as well as calculations of costs and benefits. In order to influence the development of technology for the better, we must first understand how technology and society are inextricably bound together. These writings--by thinkers ranging from Bruno Latour to Francis Fukuyama--help us do just that, examining how people shape technology and how technology shapes people. This second edition updates the original significantly, offering twenty-one new essays along with fifteen from the first edition. The book first presents visions of the future that range from technological utopias to cautionary tales and then introduces several major STS theories. It examines human and social values and

how they are embedded in technological choices and explores the interesting and subtle complexities of the technology-society relationship. Remedying a gap in earlier theorizing in the field, many of the texts illustrate how race and gender are intertwined with technology. Finally, the book offers a set of readings that focus on the sociotechnical challenges we face today, treating topics that include cybersecurity, geoengineering, and the myth of neutral technology.

In this groundbreaking study, Michael Cosby uncovers the unknown history of the transformation of the Apostle Barnabas from a peacemaker to a warrior saint. Modern Cypriot beliefs about Barnabas

diverge significantly from the New Testament depiction of the man as a leader involved in creative solutions to ethnic conflicts in the early church. Over the centuries, he morphed into a symbol of Greek Cypriot nationalism, bequeathing his power to the archbishop in Nicosia. This modern mythical St. Barnabas resulted from a complicated blend of religious and political maneuvering at key points in the history of Cyprus. Orthodox clergy made a consensus builder complicit in the ongoing strife between Greek Cypriots and Turkish Cypriots. Cosby's thought-provoking book challenges readers to ponder their own beliefs to sort through what is history and what is legend.

With a variety of interactive learning features and user-friendly pedagogy, Java 5

Illuminated provides a comprehensive introduction to programming using the most current version of the Java language, Java 5. In addition to providing all of the material necessary for a complete introductory course in Java programming, the book also features flexible coverage of other topics of interest, including Graphical User Interfaces, data structures, file input and output, and applets. Object-Oriented Programming concepts are developed progressively and reinforced through numerous Programming Activities, allowing students to fully understand and implement both basic and sophisticated techniques at a pace which is neither too fast

nor too slow. OO concepts are blended appropriately with fundamental programming techniques, including accumulation, counting, finding maximum and minimum values, and using flag and toggle variables, and supplemented with coverage of sound software engineering practices. Distinguishing this text from other introductory Java books is the authors' extensive use of an "active learning" approach to presenting the material through abundant use of graphics, visualization exercises, animations, numerous full and partial program examples, group projects, and best practices. These and other pedagogical devices facilitate hands-on, interactive learning, and make the book equally appropriate for use in "traditional" lecture environments, a computer-equipped classroom, or lab environment.
