Uniformly
accelerated motion,
or constant

acceleration, is
motion that has a
constant and
unchanging velocity.
Uniformly
accelerated motion
may or may not
include a difference
in an object's speed.
The acceleration of
an object means that
there is a net force in
the direction of that
object's acceleration.

Additionally, the
object sometimes,
but not always, has a
change in speed.

 Motion. • Under
 special
 circumstances, we
 can use a series of
 three equations to
 describe or predict
 movement. $v_f =$
 $v_i + at$ $d = v_i t +$
 $\frac{1}{2}at^2$ $v_f^2 = v_i^2 +$
 $2ad$. – Most often,

these equations are
 used to describe
 either horizontal
 or vertical motion
 – Acceleration must
 be constant.
