# Dc Motors Objective Type Question Answers

Yeah, reviewing a ebook Dc Motors Objective Type Question Answers could accumulate your close links listings. This is just one of the solutions for you to be successful. As understood, realization does not suggest that you have astonishing points.

Comprehending as well as accord even more than other will provide each success. adjacent to, the statement as well as sharpness of this Dc Motors Objective Type Question Answers can be taken as with ease as picked to act.

Questions on Electric Motors with answers-. ANS. A DC motor is a mechanically commutated electric motor powered from direct current (DC). The stator is stationary in space by definition and therefore so is its current. The current in the rotor is switched by the commutator to also be stationary in space.

### *Dc Motors Objective Type Question*

As discussed in (question number 58.)The torque developed by a d.c motor is directly proportional to Flux per pole  $\times$  Armature Resistance i.e.  $T \propto I_a$ . The diagram of the above question is given below In a cumulative compound long shunt motor, a load is being driven at rated torque and rated speed and its series field is shunted by a resistance equal to series field resistance with ...
