The application of option pricing methods, which were initially developed for financially-traded assets, are now often applied to the valuation of options on real assets. Real options, or options on real assets, supplements standard discounted cash flow valuation approaches by including the value of managerial flexibility. Real Option Modeling and Valuation attempts to bridge the gap between

theory and practice using the commercially available software program DPL© (Decision Programming Language) and Excel® to provide a decision tree approach to valuation using real options. Companion website: <https://sites.google.com/view/real-options>
