Decision Support System for Biebrza National Park | IntechOpen

A decision support system (DSS) is an interactive computer system that can be easily accessed and operated by people who are not computer specialists. It helps them to plan and make decisions. In other words, DSS is a computer-based information system that supports the process of managerial decision-making in situations that are not well structured.

Supply Clinical Decision Support Software System to NHS ...

A decision support system is an information system that supports business or organizational decision-making activities. DSSs serve the management, operations and planning levels of an organization and help people make decisions about problems that may be rapidly changing and not easily specified in advance—i.e. unstructured and semi-structured decision problems. Decision support systems can be either fully computerized or human-powered, or a combination of both. While academics have ...

Decision Support System (DSS) - Wikipedia

A Decision Support System (DSS) was developed in order to quantify environmental changes that occurred during the last two centuries leading to degradation of the wetland ecosystems of the Biebrza National Park.

A Decision Support System (DSS) is an information technology-based system designed to improve clinical decision-making [1]. CCDS systems that deliver patient-specific recommendations based on electronic guidelines have shown to successfully deliver the knowledge embedded in evidence-based guidelines [1, 2].

Information System for Decision Support

In the U.S. a goal-oriented decision support tool was developed to determine the best grazing management strategies for California and other Western states (Barry et al., 2005). Australia has developed a range of decision support tools across different aspects of the dairy farm business such as Grazplan (Donnelly et al., 2002). Other grassland management tools include Agrinet which was developed in Ireland and Pasture Coach which is in use in New Zealand.

Management Information and Decision Support System

A decision support system (DSS) is an information system that aids a business in decision-making activities that require judgment, determination, and a sequence of actions. The information system assists the mid- and high-level management of an organization by analyzing huge volumes of unstructured data and accumulating information that can help to solve problems and help in decision-making.

A decision support system for a multi
stakeholder’s viewpoint. Then, multiple decision makers are involved in the process to seek an agreement towards the definition of a consensual strategic plan. Main results: The system developed in this article integrates an information management subsystem, a module to generate alternative management regimes, growth model routines and a decision module that generates and solves mathematical formulations.

Electronic health records and clinical decision support ... A decision support solution for health systems that want to leverage MEDITECH to develop an enterprise-wide standard of care for advanced imaging and comply with the Protecting Access to Medicare Act.

Abstract. There are several benefits for developing a distributed decision support system for national health care. Decision makers especially in the health sector of the nation will make timely, informative and accurate decisions as both detailed and aggregated data from different health centres or facilities in the nation will be at their disposal together with various tools for analysis of...
