The many and varied recent developments in the field of international commercial arbitration are once again brought together in this Volume of Yearbook Commercial Arbitration. As in previous volumes, the accent lies on cases in the form of arbitral awards and court decisions, 80 in total. They are selected for inclusion for their general interest and relevance to international practice, presented in a uniform style and translated into English from Arabic, Dutch, French, German, Italian, Japanese, Russian, Swedish and Spanish. The selection of arbitral awards covers a broad spectrum of commercial sectors: finance, maritime, commodities and manufacturing, as well as a variety of contract types such as consultancy, distributorship, foreign investment and sales. The awards also examine many aspects of procedure such as assignment and succession, jurisdiction, determination of the applicable law (including *lex mercatoria*), interim measures and the powers of arbitrators. ICSID, ICC and Iran-US Claims Tribunal awards are included as well as awards from German, Italian, Japanese and Russian arbitral institutions. The North American Free Trade Agreement (NAFTA) has a place in the Yearbook for the first time in the form of a Decision on the place of arbitration and Award on jurisdiction by an ad hoc tribunal constituted under this Agreement and applying the UNCITRAL Rules. Prominence is given to the reporting on the 1958 New York Convention where 42 decisions from 15 jurisdictions comprising 13 countries, the Court of Justice of the European Communities and the Full Tribunal of the Iran-US Claims Tribunal are included.

In recent years, Corporate Social Responsibility (CSR) reporting in China has been experiencing a rapid development and the number of social reports issued by Chinese enterprises shows a sharp increasing trend. This book investigates the evolution of such reporting practice in the country and the reasons behind it. In addition, it also examines the reporting quantity and quality of Chinese enterprises by applying the GRI (Global Reporting Initiative) as an evaluation tool. In response to policy documents so as to obtain the government's recognition and to strive for more resources, state-owned enterprises, private enterprises and foreign-invested companies have made substantial efforts in social reporting in terms of quantity and coverage. However, it appears that there is still room for enhancing the quality of disclosure. The book also highlights the central government's economic, political and social roles in promoting, encouraging and controlling the development of CSR reporting.

EBOOK: Financial Accounting Theory: European Edition Routledge

Environmental, economic, and social sustainability management is one of the most complex challenges facing both private and public sector organizations in recent times. This book is different from other accounting books in that unlike other texts on accounting, it addresses the needs of variety of users. Another way in which this book differs from other textbooks is that it is meant for an all accounting audiences who are interested in current issues in sustainability, accounting, and reporting of mining companies in Ghana. It provides a good starting point for anyone wanting to embark on research in this area. The book is meant to be easy to read, so I apologize for including references and citations. If I left them all out, you would not know whether what I was saying was my personal opinion or had some authoritative evidence to back it up. I have tried to minimize the references though, consistent with the requirements of the need to evidence statements and give credit to innovative thinkers. I hope I have made it very obvious when anything is just my personal opinion. The content of this book is intended for practicing accounting and finance professionals, graduate students, and advanced undergraduate students. The social and economic context of sustainability accounting is regularly brought into discussion and accounting, like all business studies are social studies. It is done by people about people to people. It is not just about what things people own and what those things are worth.

The Promise and Perils of Infrastructure Privatization CRC Press

Since the general acceptance of the field of corporate social responsibility worldwide, corporate entities and those who act for them either as executives or "ordinary" employees are expected to be socially responsible. Being socially responsible has a number of quantifiable and unquantifiable benefits for the entity and its stakeholders. It improves the entity's bottom line results, protects jobs, and is also better for the environment. As such, it makes good sense for professionals and those that they interact with as colleagues, suppliers of goods and services, lenders etc to want to take the issue of CSR seriously. This perhaps explains why this book has chosen to explore how 19 professions across the world have integrated and continue to impress upon their staff the importance of CSR in their operational activities. We are constantly reminded that our world's natural resources are exhaustible; we can therefore no longer live for today alone if we do not want to cause substantial problems for future generations.

Its infrastructure fund model leases (or buys) staid assets ranging from toll roads to airports, piles on debt and reaps handsome rewards.

The Case of Bangladesh McGraw Hill

Historically, the study of corporate social responsibility (CSR) reporting has largely been within the context of Western economies. However, in the wake of highly publicized incidents such as Bhopal and the struggle of the Ogoni people in Nigeria, many large corporations now claim to be taking steps to improve their environmental and social performance within developing countries. Using the lens of stakeholder theory, this book examines whether the current practice of CSR reporting in developing countries is motivated by a desire to discharge accountability to all relevant stakeholders or whether it is being driven by the imperative of advancing corporate economic interests. While concepts like CSR reporting have become more fashionable, they vary widely in different national contexts; this book therefore clarifies the types and roles of CSR reporting and the underlying corporate motivations. The author considers the current CSR reporting practices in a number of developing countries, with particular attention given to illuminating a case study of Bangladesh.

Financial Accounting Oxford University Press

In a global competitive economic environment, resources that are scarce or irreplicable are a source of sustained competitive advantage for companies and organizations. Knowledge-based resources are a major and increasing driver of long term competitive advantage. Most accounting standards however do not allow for knowledge-based resource calculations, including the most important of these, intellectual capital. Intellectual capital is the collective knowledge, documented and otherwise, of individuals in an organization. In the absence of accounting standards to numerically evaluate intellectual capital, some institutions have devised their own reports and statements. But why should companies, universities, and research centers measure these resources? How are intellectual capital statements built? How does one set targets, and what indicators should they include? This book reviews the development of the field of intellectual capital reporting, including core concepts, latest developments, the main components of intellectual capital, how a statement is built, and key indicators of each component. It further analyzes experiences from a variety of pioneering companies and institutions around the globe in measuring intellectual capital, including case studies from educational and research institutions, and provides crucial transnational comparisons. Authors Ordóñez de Pablos and Edvinsson examine the challenges and next steps for the harmonization of intellectual capital reports, consider the creation of a special international agency for intellectual capital reporting standards, and evaluate the weaknesses of current standards and how they might be overcome.

Corporate Social Responsibility in Asia Springer Science & Business Media

This book explores recent developments in the theory, strategic perspective and international practice of corporate social responsibility. In particular it discusses the consequences of the economic slowdown apparent in many economies and the impact of changes in the regulatory environment. It consists of three parts: Part one addresses a variety of theoretical approaches as well as the dynamics and criticism of corporate social

responsibility. It takes into account social and governmental expectations for the new and extended role of companies in the economy and in society, and provides a new context and theoretical assumptions regarding the functions and tasks of corporate social responsibility. Part two discusses the practical aspects relating to strategic management and corporate governance, corporate disclosure and reporting, as well as the empowerment of stakeholders. Lastly, part three focuses on the international practice of corporate social responsibility in various organizational and institutional settings. Using numerous case studies, the book explores the challenges and tasks of CSR in emerging markets, in the fashion industry and in global and family companies. It identifies the changes that can be detected following the financial crisis, closing the loop and linking the empirical findings with the revised theoretical framework.
