genetic engineering - Kids | Britannica Kids | Homework Help
An engineer is a person who designs and builds complex products, machines, systems, or structures. Engineers want to know how and why things work. They have scientific training that they use to make practical things. Engineers often specialize in a specific branch of engineering.

The goal of engineers is to design things that can solve economic, environmental, or social problems. There are many different kinds of engineering. They often overlap with each other. The largest branches are civil, chemical, electrical, mechanical, and materials engineering.
