barely keeping any friends, and repeatedly getting into trouble at work. And as if all that weren't enough, she must put up with her gregarious and over-bearing 67-year-old mother as a housemate. Afraid that if this goes on, she'll finally unravel completely, Anviksha decides that she needs a break - a Bollywood style, solo-trip across Europe kind of break. What she doesn't expect is that her mother, Smita Punjabi, will insist on coming along. The unlikely duo embarks on a journey complete with nudists, an unwelcome blast

The study of interaction between matter and electromagnetic radiation is known as spectroscopy. It measures the radiation intensity as a function of wavelength. Spectroscopy is used as a basic exploratory tool in various fields such as physics, chemistry and astronomy. It allows the electronic structure, composition and physical structure of matter to be analyzed at atomic, macro and molecular scale. Some of the measurement

devices that are used in this field are spectrometers, spectrophotometers and spectral analyzers. There are various types of spectroscopy which are characterized by the nature of interaction between the material and energy. A few of these types are absorption spectroscopy, emission spectroscopy, impedance spectroscopy and reflection spectroscopy. The topics included in this book on spectroscopy are of utmost significance and bound to provide incredible insights to readers. Different
