Bien mener un projet de déploiement ou de migration vers Windows 7 ou Windows 8 De nombreuses entreprises devront mener des projets de déploiement et de migration des postes de travail vers Windows 7 ou Windows 8. Il leur faudra prendre en compte les évolutions tant technologiques (nouvel écran de démarrage, tuiles...) que fonctionnelles pour s'assurer de l'adhésion des utilisateurs. Cet ouvrage aide à cartographier les usages et métiers, propose des modèles d'optimisation du poste de travail et décrit comment mener à bien, étape par étape, un tel projet de migration. La compatibilité applicative (applications riches, Microsoft Office et Internet Explorer) est traitée - ce chantier représente plus d'un tiers du budget d'un projet de migration Windows 7/8. Des solutions Microsoft (ACT, MAP, les outils de télémétrie Office...) et tierces (Citrix AppDNA, Browsium Ion et AirShip Browser) sont présentées. Tous les fondamentaux techniques du déploiement de systèmes d'exploitation Windows (images WIM, Windows ADK, étapes d'installation, migration des profils utilisateur avec USMT, SYSPREP.J sont rappelés, ainsi que les spécificités liées à Windows 8. L'industrialisation du déploiement grâce à Windows Deployment Services (WDS) est abordée. Microsoft Deployment Toolkit (MOT) 2012 Update 1 est détaillé ensuite, ainsi que la solution System Center 2012 Configuration Manager (ConfigMgr), mise en oeuvre en appliquant la méthodologie MSF. Une étude de la télédistribution d'applications, des produits d'optimisation du poste de travail du pack MDOP (App-V,

UE-V, MED-V...J ainsi que de Windows To Go permet de comprendre les possibilités offertes aux environnements utilisateur. Enfin, l'administration dans le Cloud est analysée à travers Windows Intune. À qui s'adresse cet ouvrage ? Aux directeurs des systèmes d'informations (DSI) et aux responsables IT (Datacenter, postes de travail...) souhaitant adopter de nouveaux usages du poste de travail, tout en optimisant la gestion des infrastructures ; Aux administrateurs et ingénieurs systèmes et réseaux, consultants, architectes et chefs de projets techniques ; Aux étudiants en informatique souhaitant se spécialiser sur les architectures Microsoft.

In diesem Buch werden die Grundlagen des Opinion Minings dargestellt sowie mögliche Ansätze, Methoden und Algorithmen aus den Bereichen Text Mining, linguistische Algorithmen, semantische Technologien und Information Retrieval aufgezeigt. Beim Opinion Mining geht es darum, textuell vorliegende Meinungen von Menschen zu analysieren und ihre Einstellung zu Produkten, Marken, Organisationen, Personen oder ganz allgemein zu Themen auszuwerten.

The information infrastructure---comprising computers, embedded devices, networks and software systems---is vital to day-to-day operations in every sector: information and telecommunications, banking and finance, energy, chemicals and hazardous materials,

agriculture, food, water, public health, emergency services, transportation, postal and shipping, government and defense. Global business and industry, governments, indeed society itself, cannot function effectively if major components of the critical information infrastructure are degraded, disabled or destroyed. Critical Infrastructure Protection describes original research results and innovative applications in the interdisciplinary field of critical infrastructure protection. Also, it highlights the importance of weaving science, technology and policy in crafting sophisticated, yet practical, solutions that will help secure information, computer and network assets in the various critical infrastructure sectors. Areas of coverage include: Themes and Issues, Control Systems Security, Cyber-Physical Systems Security, Infrastructure Security, Infrastructure Modeling and Simulation, Risk and Impact Assessment. This book is the ninth volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.10 on Critical Infrastructure Protection, an international community of scientists, engineers, practitioners and policy makers dedicated to advancing research, development and implementation efforts focused on infrastructure protection. The book contains a selection of nineteen edited papers from the Ninth Annual IFIP WG 11.10 International Conference on Critical Infrastructure Protection, held at SRI International, Arlington, Virginia, USA in the spring of 2015. Software-defined networking (SDN) technologies powered by the OpenFlow protocol provide viable options to address the bandwidth needs of next-generation computer networks. And, since many large corporations already produce network devices that support the OpenFlow standard, there are opportunities for those who can manage complex and large-scale networks using these technologies. Network Innovation through OpenFlow and SDN: Principles and Design explains how you can use SDN and OpenFlow to build networks that are easy to design, less expensive to build and operate, and more agile and customizable. Among the first books to systematically address the design aspects in SDN/OpenFlow, it presents the insights of expert contributors from around the world. The book's four sections break down basic concepts, engineering design, QoS (quality-of-service), and advanced topics. Introduces

the basic principles of SDN/OpenFlow and its applications in network systems Illustrates the entire design process of a practical OpenFlow/SDN Addresses the design issues that can arise when applying OpenFlow to cloud computing platforms Compares various solutions in QoS support Provides an overview of efficient solutions to the integration of SDN with optical networks Identifies the types of network attacks that could occur with OpenFlow and outlines possible solutions for overcoming them Supplying a cutting-edge look at SDN and OpenFlow, this book gives you the wide-ranging understanding required to build, deploy, and manage OpenFlow/SDN products and networks. The book's comprehensive coverage includes system architectures, language and programming issues, switches, controllers, multimedia support, security, and network operating systems. After reading this book you will understand what it takes to make a smooth transition from conventional networks to SDN/OpenFlow networks.

«Pensieri, baci, abbracci. Miei cari tutti e paesani, muoio per un solo ideale di bontà ed una pace eterna». Enzo Dalai Un libro per far luce sulle stragi naziste e fasciste che hanno profondamente segnato il territorio reggiano. Le uccisioni dei fratelli Cervi e di

don Pasquino Borghi, le stragi di Cervarolo e della Bettola: violenza agita da nazisti e fascisti contro i civili durante la seconda guerra mondiale nel territorio reggiano. Massimo Storchi, storico della Resistenza, raccoglie in questo volume quanto la sua minuziosa ricerca ha prodotto in questi anni, lavorando sia sui documenti custoditi in varie istituzioni del territorio sia in archivi italiani e tedeschi e integrandola con quanto già scritto sulle vicende che hanno insanguinato la provincia di Reggio Emilia dal settembre 1943 al maggio 1945. Con l'obiettivo di fornire elementi certi su quei fatti, per sottrarli - per quanto possibile - a ogni rischio di riscrittura o di negazionismo e contemporaneamente precisare gli snodi fondamentali della strategia di "guerra ai civili" condotta dalle truppe tedesche e naziste. Per ogni fatto narrato l'autore ha cercato anche di fare il punto sulla "stagione dei processi", giunta ormai alla fine. Un percorso dal quale emerge con chiarezza quanto il modesto lavoro dello storico non sia rivolto unicamente alla definizione di un passato ormai trascorso, ma si rifletta purtroppo nella nostra contemporaneità, scenario di quelle guerre "moderne" dove l'uccisione di civili innocenti è diventata la tragica e quotidiana normalità. Massimo Storchi, storico e archivist, dirige il Polo Archivistico del Comune di Reggio Emilia, gestito da ISTORECO. Ha pubblicato diversi saggi su Resistenza e lotte politiche e sociali nel dopoguerra in Emilia Romagna, con attenzione particolare al tema della violenza. Ha scritto: *Uscire dalla guerra. Ordine pubblico e forze politiche. Modena 1945-1946* (Franco Angeli, 1995); *Combattere si può vincere bisogna. La scelta della violenza fra Resistenza e dopoguerra. Reggio Emilia 1943-1946* (Marsilio, 1998); *Sangue al bosco del Lupo. Partigiani che uccidono partigiani. La storia di "Azor"* (Aliberti, 2005); *Il sangue dei vincitori. Saggio sui crimini fascisti e i processi del dopoguerra (1945-1946)* (Aliberti, 2008); con Italo Rovali *Il primo giorno d'inverno. Cervarolo 20 marzo 1944. Una strage nazifascista dimenticata* (Aliberti, 2010); *Question Time. Cos'è l'Italia. Cento domande (e risposte) sulla storia del Belpaese* (Aliberti, 2011); *Il patto di Khatarine. Gli strani*

casi di Dario Lamberti (Aliberti, 2012); con Germano Nicolini Noi sognavamo un mondo diverso. Il Comandante Diavolo si racconta (Imprimatur, 2012).
