Production networks in many sectors have become

increasingly fragmented. Cutting labour costs by lowering

pay, increasing work intensity and/or shifting flexibility

costs to workers are just some of the motivations for

outsourcing. But it can also be used to circumvent

employee representation and collective bargaining

systems within companies, and labour market regulations

in general. Though such intentions may not drive the bulk

of outsourcing decisions, any change in company

boundaries is likely to impact employment, working

conditions and industrial relations in the value chain. This

book focuses on the dynamics of outsourcing in Europe

from the perspective of employees. In particular, it

considers one insufficiently studied aspect: the impact of

outsourcing on working conditions and employment

relations in companies. The book also collects lessons

learned from the efforts of employees and trade unions to

shape outsourcing decisions, processes and their impact

on employment and working conditions.
