Healing the Scars Life Leaves on the Soul Springer Nature
New York Times bestselling author Allen St. John started off looking for the world's greatest guitar, but what he found instead was the world's greatest guitar builder. Living and working in Rugby, Virginia (population 7), retired rural mail carrier Wayne Henderson is a true American original, making America's finest instruments using little more than a pile of good wood and a sharp whittling knife. There's a 10-year waiting list for Henderson's heirloom acoustic guitars—and even a musical legend like Eric Clapton must wait his turn. Partly out of self-interest, St. John prods Henderson into finally building Clapton's guitar, and soon we get to pull up a dusty stool and watch this Stradivari in glue-stained blue jeans work his magic. The story that ensues will captivate you with its portrait of a world where craftsmanship counts more than commerce, and time is measured by old jokes, old-time music, and homemade lemon pies shared by good friends.

Creativity often leads to the development of original ideas that are useful or influential, and maintaining creativity is crucial for the continued development of organizations in particular and society in general. Most research and writing has focused on individual creativity. Yet, in recent years there has been an increasing acknowledgment of the importance of the social and contextual factors in creativity. Even with the information explosion and the growing necessity for specialization, the development of innovations still requires group interaction at various stages in the creative process. Most organizations increasingly rely on the work of creative teams where each individual is an expert in a particular area. This volume summarizes the exciting new research developments on the processes involved in group creativity and innovation, and explores the relationship between group processes, group context, and creativity. It draws from a broad range of research perspectives, including those investigating cognition, groups, creativity, information systems, and organizational psychology. These different perspectives have been brought together in one volume in order to focus

attention on this developing literature and its implications for theory and application. The chapters in this volume are organized into two sections. The first focuses on how group decision making is affected by factors such as cognitive fixation and flexibility, group diversity, minority dissent, group decision-making, brainstorming, and group support systems. Special attention is devoted to the various processes and conditions that can inhibit or facilitate group creativity. The second section explores how various contextual and environmental factors affect the creative processes of groups. The chapters explore issues of group autonomy, group socialization, mentoring, team innovation, knowledge transfer, and creativity at the level of cultures and societies. The research presented in this section makes it clear that a full understanding of group creativity cannot be accomplished without adequate attention to the group environment. It will be a useful source of information for scholars, practitioners, and students wishing to understand and facilitate group creativity.

The Official History of the UK Strategic Nuclear Deterrent PHI Learning Pvt. Ltd.

Volume II of The Official History of the UK Strategic Nuclear Deterrent provides an authoritative and in-depth

examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were nevertheless committed not to develop another generation of nuclear weapons beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent. During 1967, under heavy pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of British politics, Cold War history, nuclear proliferation and international relations.

A memoir by the mustachioed baseball pitcher who went playing rocky, trash-ridden fields in Castro's Cuba to becoming a Boston Red Sox legend. Luis Tiant is one of the most charismatic and accomplished players in Boston Red Sox and Major League Baseball history. With a barrel-chested physique and a Fu Manchu mustache, Tiant may not have looked like the lean, sculpted ace he usually played against, but nobody was a tougher competitor on the diamond, and few were as successful. There may be no more qualified twentieth-century pitcher not yet enshrined in the National Baseball Hall of Fame. His big-league dreams came at a price: racism in the Deep South and the Boston suburbs, and nearly fifteen years separated from a family held captive in Castro's Cuba. But baseball also delivered World Series stardom and a heroic return to his island home after close to a half-century of forced exile. The man whose name—"El Tiante"—became a Fenway Park battle cry has never fully shared his tale in his own words, until now. In *Son of Havana*, Tiant puts his heart on his sleeve and describes his road from torn-up fields in Havana to the pristine lawns of major league ballparks. Readers will share Tiant's pride when appeals by a pair of US senators to baseball-fanatic Castro secure freedom for Luis's parents to fly to Boston and witness the 1975 World Series glory of their child. And readers will join the big-league ballplayers for their spring 2016 exhibition game in Havana, when Tiant—a living link to the earliest, scariest days of the Castro regime—threw out the first pitch.

Dead End in Norvelt is the winner of the 2012 Newbery Medal for the year's best contribution to children's literature and the Scott O'Dell Award for Historical Fiction! Melding the entirely true and the wildly fictional, *Dead End in Norvelt* is a novel about an incredible two months for a kid named Jack Gantos, whose plans for vacation excitement are shot down when he is "grounded for life" by his feuding parents, and whose nose spews bad blood at every little shock he gets. But plenty of excitement (and shocks) are coming Jack's way once his mom loans him out to help a feisty old neighbor with a most unusual chore—typewriting obituaries filled with stories about the people who founded his utopian town. As one obituary leads to another, Jack is launched on a strange adventure involving molten wax, Eleanor Roosevelt, twisted promises, a homemade airplane, Girl Scout cookies, a man on a trike, a dancing plague, voices from the past, Hells Angels . . . and possibly murder. Endlessly surprising, this sly, sharp-edged narrative is the author at his very best, making readers laugh out loud at the most unexpected things in a dead-funny depiction of growing up in a slightly off-kilter place where the past is present, the present is confusing, and the future is completely up in the air.

Developing appropriate responses to an ageing population is recognized by policy makers throughout the developed world as a top priority, as is the vital contribution made by family caregivers. However, cultural, demographic and organizational differences between countries have encouraged diverse patterns of response to this common challenge. This book provides a systematic cross-cultural analysis of contemporary patterns and future trends in all major countries of the European Union. Additional interest is provided by including Poland emerging from the post-Communist block as the country at the forefront for joining the European Union. The book should be useful to European policy makers and academics involved in studying the health and social care needs of older people and the capacity, contribution and needs of family caregivers who provide care to older people. The book is also relevant for policy makers and researchers in other countries, mostly in North America and Australia who wish to study European

approaches to supporting older people and family caregivers.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
